

Contents

I	Introduction	1
I.1	Classification of television content delivery technologies	1
I.2	Unidirectional background push Content Download Services	6
I.2.1	Architecture	8
I.2.2	File delivery over unidirectional transport	9
I.2.3	Storage management for unidirectional file delivery	10
I.3	Problem definition	11
I.4	Scope and contributions	12
I.5	Methodology	14
II	System models	19
II.1	Server models	21
II.1.1	Parametric models for file sizes and content durations	22
II.1.2	Modeling the running length of television (IMDB) content	27
II.1.3	Parametric models for the content popularity	33
II.1.4	Modeling the popularity of television (IMDB) content	36
II.2	Channel models	39
II.2.1	Model for packet losses	40
II.2.2	Model for carousel cycles	42
II.2.3	Calibration of the model with measurement data	44
II.3	Client models	47
II.3.1	Models for the background CDS client application	48
II.3.2	User model	50
II.4	Conclusions	54
III	Opportunistic Insertion of television services	57
III.1	First Generation terrestrial DVB Networks (DVB-T)	58
III.2	MPEG Transport time model	61
III.3	Opportunistic Data Insertion in a DVB Multiplex	65
III.3.1	Constant Bit Rate and Variable Bit Rate MPEG encoding	65
III.3.2	Constant bit Rate multiplexer with ODI	66
III.3.3	Measurement results	67
III.4	Second Generation terrestrial DVB Networks	75
III.4.1	DVB-H networks	75
III.4.2	DVB-T2 Networks	78
III.5	Opportunistic Data Insertion in a DVB tunnel	79

III.5.1	IP datagram encapsulation with ODI	80
III.5.2	Results of ODI in guaranteed bitrate tunnel	83
III.5.3	Results of ODI with time slicing encapsulation	85
III.6	Conclusions	94
IV	Background Content Download Services in DVB Networks	97
IV.1	Background Content Download Services for television sets	99
IV.1.1	Long term bitrate of ODI in a DVB multiplex	99
IV.1.2	Carousel times of Background CDSs in DVB multiplexes	104
IV.1.3	Access times of Background CDSs in DVB multiplexes	108
IV.2	Background Content Download Services for mobile terminals	110
IV.2.1	Access times of background CDSs over DVB tunnels	110
IV.2.2	Evaluation results	112
IV.3	Conclusions	116
V	Object Multiplexing and AL-FEC	117
V.1	Analysis of Object multiplexing with AL-FEC	117
V.2	Object Multiplexing	123
V.2.1	Lower bounds of object multiplexing with ODI	123
V.2.2	The Modified Virtual Clock Algorithm	129
V.2.3	The Modified Weighted Fair Queuing Algorithm	133
V.3	AL-FEC	137
V.3.1	Improvement of the download time with AL-FEC	140
V.3.2	AL-FEC in combination with Object Multiplexing	145
V.3.3	AL-FEC with Variable ODI bitrate	149
V.4	Conclusions	151
VI	Popularity, Storage Management, Personalization and QoE	153
VI.1	Estimation of the popularity of television content	154
VI.1.1	Audience measurements	154
VI.1.2	Audience segmentation and content personalization	155
VI.1.3	Recommender Systems for background push CDS	156
VI.2	Storage management for background push CDSs	161
VI.2.1	Evaluation of the loading time	161
VI.2.2	Object multiplexing and storage management	165
VI.3	Background push CDS as a VoD local cache	169
VI.3.1	Cache hit ratio without channel losses	169
VI.3.2	Cache hit ratio with channel losses	170
VI.4	Conclusions	173
