Table of contents

List of figures

List of Tables

1 Introduction

1.1 Background

1.2 Fabrication technologies

1.3 Objectives

1.4 Contents

2 Serial and parallel coupled resonator optical waveguides

2.1 Introduction

2.2 Transfer Matrix Method model of coupled resonator structures

2.2.1 Directional coupler

2.2.2 The waveguides

2.2.3 Ring resonator

2.3 Apodization

2.3.1 Apodized SCISSORS

2.3.2 Apodized CROWs

2.4 Synthesis of coupled resonator optical waveguides by cavity aggregation

2.4.1 Layer aggregation method

2.4.2 Reconstruction procedure

2.4.3 Reconstruction results

2.5 Conclusions

3 Longitudinal offset technique for apodization of CROWs

3.1 Introduction

3.2 Coupling constant control through the offset technique

3.3 Coupling constant sensitivity analysis

3.3.1 Gap apodized CROWs

3.3.2 Offset apodized CROWs

3.4 Transfer Matrix analysis

3.5 Conclusions

4 Design and fabrication of Coupled Resonators in Silicon On Insulator

4.1 Introduction

4.2 Fabrication details

4.3 Building blocks design

4.4 Experimental results

4.4.1 First fabrication run

4.4.2 Second fabrication run

4.5 Conclusions

5 Applications

5.1 Introduction

5.2 Microwave photonics beamformer based on ring resonators and AWGs

5.2.1 All-pass ring resonator based microwave phase shifter

5.2.2 Tunable beamformer concept

5.3 Design and fabrication in SOI technology

5.3.1 Characterization

5.4 Conclusions

6 Conclusions and future work

6.1 Conclusions

6.2 Future work

Appendix A Integrated optics devices modeling using High Performance Computing and parallel Finite Differences in the Time Domain algorithms

A.1 MEEP

A.2 Computational requirements

A.3 Usage examples

A.3.1 Grating couplers

A.3.2 Ring Resonators

Appendix B Characterization setup

Appendix C List of publications

C.1 SCI Journal papers

C.2 Conference papers

C.3 Papers in other journals
