Abstract (English)	vi
Abstract (Spanish)	viii
Abstract (Valencià)	x
Citations Published Work	xii
List of Figures	xxii
List of Tables	xxiv
1 Introduction	1
2 Predicting the academic underachievement in high school in Spain over the next few years: A dynamic modelling approach	9
2.1 Introduction	9
2.2 Building the mathematical model	10
2.2.1 Available data	10
2.3 Parameter estimation	14
2.4 Prediction over next few years	15
2.5 Conclusions	16
3 Non-parametric probabilistic forecasting of academic performance in Spanish high school using an epidemiological modelling approach	19
3.1 Introduction	19
3.2 The epidemiological-mathematical model	20
3.2.1 Available data	20
3.2.2 Model building	21
3.2.3 Scaling the model	26
3.3 Deterministic parameter estimation and prediction over the next few years	27

3.4	Introducing uncertainty in the model parameters and predicting the next few years	30
3.4.1	Error term analysis	31
3.4.2	Generating new output perturbed data	33
3.4.3	Obtaining confidence intervals for model outputs	33
3.5	Abandon analysis	37
3.6	Conclusions	39
4	Modelling the dynamics of the students academic performance in the German region of North Rhine-Westphalia: an epidemiological approach with uncertainty	41
4.1	Introduction	41
4.2	Model building	42
4.2.1	Available data	42
4.2.2	The type-epidemiological model	43
4.3	Scaling, fitting and predictions	48
4.4	Introducing uncertainty in the model parameters and predicting the next few years	50
4.4.1	Error term analysis	51
4.4.2	Generating new output perturbed data	53
4.4.3	Obtaining confidence intervals for model outputs	54
4.5	Conclusions	57
5	Estimation of the cost of the academic underachievement in high school in Spain over the next few years	59
5.1	Introduction	59
5.2	Estimation with 95% confidence intervals of the cost of the academic underachievement in <i>Bachillerato</i> for the next few years for the Spanish Government	60
5.3	Estimation with 95% confidence intervals of the investment in education by Spanish families of <i>Bachillerato</i> students in the next few years	66
5.4	Conclusions	70
6	Conclusion and discussion	73
Appendix A epiModel: A system to build automatically systems of differential equations of compartmental type-epidemiological models		77
A.1	Introduction	77
A.2	How to build the file "ModelDefinition"	80
A.2.1	General variable	80
A.2.2	Definition of the subpopulations	80
A.2.3	Defining Parameters	81

A.2.3.1	Parameters of independent term and linear term	82
A.2.3.2	Parameters of non-linear terms	84
A.3	Steps to building the system of differential equations	85
A.3.1	The file "Model.data"	86
A.3.2	The file "parameters.data"	87
A.4	Examples	87
A.4.1	SIRS model	88
A.4.2	SIR model with two age groups	90
A.4.3	SIR model with two age groups and two sexes	93
A.5	Conclusions	96
Appendix B Validation of our Spanish mathematical model results		99
Appendix C Validation of our German mathematical model results		103
Appendix D Time series analysis: Forecasting models in Statgraphs Plus 5.1.		105
D.1	Introduction	105
D.2	Forecasting models	106
D.3	Validation of the model	108
D.4	Obtaining 95% confidence intervals	109
