

## ÍNDICE GENERAL

<b>INTRODUCCIÓN GENERAL</b> .....	1
<b>OBJETIVOS</b> .....	31
<b>PRESENTACIÓN DE LOS TRABAJOS</b> .....	35
<b>CAPÍTULO 1. Comparing carboxymethyl cellulose and starch as thickeners in oil/water emulsions. Implications on rheological and structural properties</b> .....	39
<b>INTRODUCTION</b> .....	42
<b>MATERIAL AND METHODS</b> .....	44
Composition and preparation of oil/water (o/w) emulsions .....	44
Rheological measurements .....	45
Flow behavior .....	46
Viscoelastic behavior .....	46
Particle size analysis .....	47
Particle charge analysis .....	47
Microstructure .....	47
Statistical analysis .....	48
<b>RESULTS AND DISCUSSION</b> .....	48
Flow behavior .....	48
Viscoelastic properties .....	55
Particle size distribution .....	59
Particle charge .....	64
Microstructure .....	66
<b>CONCLUSIONS</b> .....	70
<b>REFERENCES</b> .....	71

<b>CAPÍTULO 2. Flow properties and viscoelasticity of high protein soy desserts. Effect of hydrocolloid .....</b>	<b>75</b>
INTRODUCTION.....	78
MATERIAL AND METHODS .....	80
Composition and preparation of samples .....	80
Rheological measurements.....	82
Flow properties .....	82
Viscoelasticity.....	84
Experimental design and data analysis.....	84
RESULTS AND DISCUSSION .....	85
Flow behaviour .....	85
Viscoelastic properties .....	94
Influence of composition on instrumental indices of oral thickness ....	97
CONCLUSIONS .....	101
REFERENCES.....	102

<b>CAPÍTULO 3. Fat-thickener interactions on dairy systems: effects on colour, rheology, flavour release and sensory perception.....</b>	<b>107</b>
INTRODUCTION.....	110
MATERIAL AND METHODS .....	112
Sample composition and preparation .....	112
Instrumental measurement of colour.....	113
Rheological measurements.....	113
Flow behaviour .....	114
Viscoelastic behaviour .....	114
In vivo aroma release measurements .....	115
Sensory evaluation .....	115
Experimental design and data analysis.....	116
RESULTS AND DISCUSSION .....	117
Instrumental colour measurements .....	117

Rheological properties .....	122
Flow behaviour .....	122
Viscoelastic properties .....	124
In-vivo aroma release measurements .....	129
Sensory evaluation .....	132
CONCLUSIONS.....	135
REFERENCES.....	136

**CAPÍTULO 4. Flavor release and sensory characteristics of o/w emulsions. Influence of composition, microstructure and rheological behaviour .....**

<b>INTRODUCTION.....</b>	<b>146</b>
<b>MATERIAL AND METHODS .....</b>	<b>148</b>
Composition and preparation of oil/water (o/w) emulsions.....	148
Rheological measurements .....	150
Flow behavior .....	150
Viscoelastic behavior .....	151
Structural analysis and physical stability of o/w emulsions.....	151
Fluorescence microscopy.....	151
Particle size distribution.....	152
Emulsion stability .....	152
In vivo aroma release measurements .....	152
Sensory evaluation .....	153
Descriptor selection and training .....	153
Descriptive profile .....	155
Statistical analysis.....	155
<b>RESULTS .....</b>	<b>156</b>
Rheological properties .....	156
Structural properties and physical stability .....	159
Particle-size distribution .....	159

Microstructure.....	161
Creaming index.....	162
In-vivo aroma release.....	163
Sensory properties.....	165
DISCUSSION .....	169
REFERENCES.....	175

**CAPÍTULO 5. Impact of structural differences on perceived sweetness**

<b>in semisolid dairy matrices .....</b>	<b>183</b>
INTRODUCTION.....	186
MATERIAL AND METHODS .....	189
Sample composition and preparation .....	189
Rheological measurements.....	191
Flow behaviour .....	191
Microstructure .....	192
Sensory evaluation .....	193
Data analysis .....	193
RESULTS AND DISCUSSION .....	195
Flow properties .....	195
Microstructure .....	198
Sensory analysis.....	200
Relationships between instrumental and sensory data .....	203
CONCLUSIONS.....	205
REFERENCES.....	206

**CAPÍTULO 6. Fat replacers in low-fat carboxymethyl cellulose dairy beverages. Color, rheology and consumer perception .....**

<b>INTRODUCTION.....</b>	<b>216</b>
<b>MATERIAL AND METHODS .....</b>	<b>218</b>
Sample preparation and composition .....	218

Instrumental measurement of color.....	220
Rheological measurements .....	221
Flow behavior .....	222
Viscoelastic behavior .....	223
Sensory evaluation: Free-Choice Profile .....	223
Statistical analysis.....	224
Color and rheological data analysis .....	224
Sensory data analysis .....	225
<b>RESULTS AND DISCUSSION .....</b>	<b>225</b>
Influence of fat content on color and rheological behavior .....	225
Instrumental measurement of color.....	225
Rheological properties .....	226
Influence of fat replacer addition on instrumental color of low-fat samples.....	228
Influence of fat replacer addition on rheological properties of low-fat samples .....	232
Consumer perception: Free Choice Profile .....	241
<b>CONCLUSIONS.....</b>	<b>246</b>
<b>REFERENCES.....</b>	<b>247</b>

**CAPÍTULO 7. Optimizing acceptability of a high protein soy dessert combining surface response methodology and jar scales.....** 253

<b>INTRODUCTION.....</b>	<b>256</b>
<b>MATERIAL AND METHODS .....</b>	<b>259</b>
Materials .....	259
Experimental design and sample preparation .....	259
Sensory evaluation.....	261
Data analysis .....	262
<b>RESULTS AND DISCUSSION .....</b>	<b>263</b>
Optimization of soy-based citrus flavored dessert .....	263

Response to JAR scales. Relationship with acceptability .....	273
CONCLUSIONS .....	280
REFERENCES .....	282
<b>DISCUSIÓN GENERAL DE LOS RESULTADOS .....</b>	<b>289</b>
<b>CONCLUSIONES .....</b>	<b>301</b>
