Abstract 3
Content 4
Terms, symbols and notations 7
Figures and tables 12
Cap. **1. INTRODUCTION**
Cap. **2. PRESENT STATE OF RESEARCH IN THE FIELD OF THESIS** 22
2.1. Introduction 22
2.2. Materials used in biosystems structure 25
2.2.1. Definitions and brief history 25
2.2.2. Biomaterials classification 29
2.2.3. Overview on the biomaterials types 31
2.2.4. Using biomaterials in bio-systems 43
2.2.5. Future development of biomaterials 45
2.3. Current state of knowledge and research in the behavior of biomaterials 45
2.3.1. General features of the biomaterials properties 45
2.3.2. Mechanical behavior 48
2.3.3. Chemical behavior 50
2.3.4. Biomaterials degradation 51
2.3.5 Thermal behavior 53
2.3.6. Biocompatibility 53
2.4. Methods for determination, study and control of bio-composite mechanic and thermal behavior 55
2.5. Conclusions 59
Cap. **3. THESIS OBJECTIVES** 61
3.1. Motivation of the theme 61
3.2. Thesis objectives 63
Cap. **4. ANALYSIS METHOLOLOGY OF THE LOWER LIMB ANATOMICAL AND BIOMECHANICAL CHARACTERISTICS** 65
4.1 Introduction 65
4.2. Lower limb movements, axes and spatial plans of the movement 69
4.3. Lower limb bones 71
4.3.1. Bony pelvis 71
4.3.2 Thigh bones 73
4.3.3. Shank bones 76
4.3.4. Foot bones 77
4.4. Lower limb joints 79
4.4.1. Pelvis joints 79
4.4.2. Hip join (coxo-femoral joint) 81
4.4.3. Shank joints 85
4.4.4. Knee joints 85
4.4.5. Ankle articulation 88
4.4.6. Levers categories in cinematic chain of lower limb 89
4.5. Biomechanics of gait 90
4.5.1. Human locomotion 90
4.5.2. Gait. Definitions 95
4.5.3. Gait phases 96
4.5.4. Gait parameters 99
4.5.7. Kinetic parameters 104

4.6. Biomechanics of the race 104
4.6.1. Running phases 104
4.6.2. Race parameters 107
4.7. The biomechanics of the running and the sprint at the leg amputated persons with sports prosthesis 114
4.7.1. Characteristics 114
4.7.2. The behavior of the sports prosthesis 117
4.7.3. The kinematics parameters 118
Cap. **5. METHODS TO ANALYSE THE BEHAVIOR OF CARBON FIBER REINFORCED EPOXY COMPOSITES BIOMATERIALS USED IN THE CONSTRUCTION OF THE J PROSTHETIC BLADES** 121
5.1. J blades manufacturing process features 121
5.2. Injection process simulation by RTM procedure with Autodesk Moldflow Insight 2012® software 125
5.2.1. General assumptions for simulation 125
5.2.2 Simulation of the RTM manufacturing by injection of J prosthetic element 128
5.2.3 Simulation of specimen injection 131
5.3. Theoretical study of carbon fiber epoxy reinforced multilayered behavior 135
5.3.1. General assumptions on carbon fiber reinforced multilayered composites 135
5.3.2. Elastic behavior of lamina and of multilayered composite 137
5.3.3 Thermal behavior of multilayered composite epoxy/carbon fiber 142
5.4. Simulation of layered composite behavior of epoxy resin and carbon fiber-reinforced of J prosthetic blade 145
5.4.1. Calculus hypothesis 145
5.4.2. Geometrical definition of the model 145
5.4.3. Prosthetic J blade meshing 146
5.4.4. Definition of limit load conditions 147
5.4.5. Loading cases definition 147
5.4.6. Materials definition 147
5.4.7. Simulation of blade behavior 148
5.5. Method for determining the epoxy/carbon fiber reinforced composite behavior in prosthesis normal functional conditions 156
Cap. **6. EXPERIMENTAL DETERMINATION OF CARBON FIBER REINFORCED MULTILAYERED COMPOSITE MECHANICAL PROPERTIES** 168
6.1. Succession of stages followed in experimental research 168
6.2. Preparation of test specimens 168
6.3. Determination of multilayered composite material mechanical properties in compression 170
6.3.1. Form and dimensions of samples 170
6.3.2. Working method 171
6.3.3. Experimental data processing 174
6.4. Determination of multilayered composite material mechanical properties in bending 176
6.4.1. Experimental research hypotheses 176
6.4.2. Apparatus 178
6.4.3. Samples form and dimensions 180
6.4.4. Working method 181

6.4.5. Data acquisition 182
6.4.6. Experimental data analysis 182
6.5 Determination of layered composite mechanical properties for mechanical solicitation DMA 186
6.5.1. Principle of experimental DMA analyze method 186
6.5.2. Experimental installation description 187
6.5.3. Samples forms and dimensions 189
6.5.4. Working mode 189
6.5.5. Experimental data processing 190
6.6. Experimental researches on linear thermal dilatation coefficient of layered epoxy composite with carbon fibers reinforced 193
6.6.1. Experimental device 193
6.6.2. Samples-specifications, characteristics and particularities 194
6.6.3. Working mode 194
6.6.4. Experimental data processing 195
6.6.5. Conclusions 199
Cap. 7. **FINAL CONCLUSIONS. ORIGINAL CONTRIBUTIONS. THE MODE OF RESULTS CAPITALIZING AND FUTURE RESEARCH DIRECTIONS** 200
6.1. Final conclusions 200
6.2. Original contributions 205
6.3. The mode of the capitalizing of the results 208
6.4. Future research directions 208
