# TABLE OF CONTENTS

---

|          |  |           |
|----------|--|-----------|
| <b>1</b> | <b>Introduction</b>  | <b>1</b>  |
| 1.1      | The Schrödinger equation and its varieties . . . . .         | 1         |
| 1.1.1    | The linear Schrödinger equation . . . . .                    | 1         |
| 1.1.2    | The semi-classical limit . . . . .                           | 4         |
| 1.1.3    | Many particles and the Gross-Pitaevskii equation . . . . .   | 6         |
| 1.1.4    | Eigenstates and imaginary time . . . . .                     | 9         |
| 1.2      | Spatial discretizations . . . . .                            | 10        |
| 1.2.1    | Finite differences . . . . .                                 | 11        |
| 1.2.2    | Spectral methods . . . . .                                   | 11        |
| 1.2.3    | Hagedorn-wavepackets . . . . .                               | 14        |
| 1.3      | Temporal discretizations . . . . .                           | 15        |
| 1.3.1    | Chebyshev method . . . . .                                   | 16        |
| 1.3.2    | Lanczos method . . . . .                                     | 17        |
| 1.3.3    | Splitting methods . . . . .                                  | 19        |
| 1.3.4    | Magnus expansion . . . . .                                   | 29        |
| <b>2</b> | <b>Linear Schrödinger equations</b>                          | <b>35</b> |
| 2.1      | The Harmonic Oscillator . . . . .                            | 36        |
| 2.1.1    | Solving the harmonic oscillator by Fourier methods . . . . . | 39        |
| 2.1.2    | Higher dimensions . . . . .                                  | 41        |
| 2.1.3    | The Hermite-Fourier methods . . . . .                        | 43        |
| 2.1.4    | Numerical results . . . . .                                  | 44        |
| 2.2      | The Harmonic Oscillator: non-autonomous . . . . .            | 49        |
| 2.2.1    | Varying trap frequency . . . . .                             | 49        |
| 2.2.2    | The driven oscillator . . . . .                              | 51        |
| 2.2.3    | Numerical results . . . . .                                  | 54        |
| 2.3      | Rotating traps . . . . .                                     | 55        |
| 2.3.1    | Angular momentum algebra . . . . .                           | 57        |
| 2.3.2    | The rotation kernel . . . . .                                | 58        |
| 2.3.3    | Isotropic trap . . . . .                                     | 59        |
| 2.3.4    | Anisotropic trap . . . . .                                   | 60        |
| 2.3.5    | Time dependence for rotating traps . . . . .                 | 61        |
| 2.3.6    | Numerical results . . . . .                                  | 64        |
| <b>3</b> | <b>Non-linear equations: Gross-Pitaevski</b>                 | <b>67</b> |
| 3.1      | Near-integrable systems . . . . .                            | 68        |

|                   |  |            |
|-------------------|--|------------|
| 3.1.1             | Spectral methods for the nonlinear Hamiltonian . . . . . | 68         |
| 3.1.2             | Numerical results . . . . .                              | 71         |
| 3.2               | Unconventional splitting methods . . . . .               | 75         |
| 3.2.1             | Modifying nonlinear potentials . . . . .                 | 75         |
| 3.2.2             | Complex coefficients . . . . .                           | 76         |
| 3.2.3             | Numerical experiments . . . . .                          | 78         |
| <b>4</b>          | <b>The semi-classical limit</b>                          | <b>83</b>  |
| 4.1               | The autonomous case . . . . .                            | 84         |
| 4.1.1             | The Lie-algebraic setting . . . . .                      | 86         |
| 4.1.2             | An asymptotic splitting . . . . .                        | 89         |
| 4.1.3             | Stability . . . . .                                      | 99         |
| 4.1.4             | Computing the exponential . . . . .                      | 100        |
| 4.1.5             | Numerical results . . . . .                              | 102        |
| 4.2               | Propagators based on Hagedorn wave-packets . . . . .     | 104        |
| 4.2.1             | An interpretation of Hagedorn dynamics . . . . .         | 105        |
| 4.3               | Time-dependent potentials . . . . .                      | 108        |
| 4.3.1             | Slowly varying external field . . . . .                  | 108        |
| 4.3.2             | Highly oscillating time dependence . . . . .             | 112        |
| <b>5</b>          | <b>The ground state: Imaginary time propagation</b>      | <b>117</b> |
| 5.1               | Motivation and background . . . . .                      | 118        |
| 5.2               | Splitting methods for the Schrödinger equation . . . . . | 119        |
| 5.2.1             | New splitting methods for the ITP problem . . . . .      | 122        |
| 5.2.2             | Methods without modified potentials . . . . .            | 123        |
| 5.2.3             | Methods with modified potentials . . . . .               | 125        |
| 5.3               | Numerical results . . . . .                              | 127        |
| 5.3.1             | Variable step method . . . . .                           | 133        |
| <b>6</b>          | <b>Conclusions and Outlook</b>                           | <b>137</b> |
| 6.1               | Harmonic oscillators and rotating traps . . . . .        | 137        |
| 6.2               | Nonlinear Schrödinger equations . . . . .                | 138        |
| 6.3               | Semiclassical Schrödinger equations . . . . .            | 138        |
| 6.4               | Imaginary time . . . . .                                 | 139        |
| 6.5               | Outlook . . . . .  | 140        |
| <b>A</b>          | <b>Algebraic tools</b>                                   | <b>143</b> |
| A.1               | Algebra . . . . .  | 143        |
| A.2               | Structure coefficients for rotating oscillator . . . . . | 144        |
| A.3               | Composition for the rotating oscillator . . . . .        | 145        |
| <b>References</b> |  | <b>145</b> |
