

Table of contents

Agradecimientos	v
Resumen	ix
Resum	xiii
Summary	xvii
General contents	xxi
Digital annexes	xxi
Table of contents	xxii
Index of figures	xxvii
Chapter 1: Introduction	37
1.1. Motivation of this thesis	43
1.2. Research objectives	44
1.3. Description of the contents of this thesis	45
1.4. Dissemination works	49
1.4.1. Indexed journal articles	49
1.4.2. Participation in conferences	49
Chapter 2: State-of-the-art	53
2.1. Drought management and risk assessment in water resources systems	54
2.1.1. Drought as a natural hazard	57
2.1.2. Drought monitoring, forecasting and risk assessment	60
2.1.3. Planning for drought. Measures for risk and impacts mitigation	67
2.2. Optimization of water resources systems	69
2.2.1. Linear programming	75
2.2.2. Non-linear programming	77
2.2.3. Dynamic programming	79
2.2.4. Computational intelligence (Heuristic optimization)	80
2.3. Network flow optimization	84
2.3.1. The Minimum Cost Network Flow Problem	87
2.3.2. Algorithms for solving the MCF problem	88
2.3.3. Application of MCF algorithms in water resources optimization tools	99
2.4. Decision Support Systems for Water Resources Management	102
2.4.1. Role of decision support systems in drought planning and management	109
2.5. Final remarks	110
Chapter 3: Advances in NF optimization of WRS	119
3.1. Introduction	120
3.2. Network flow optimization and non-linearities. Algorithms, iterations and convergence	124
3.2.1. Generalised model formulation and network construction	125
3.2.2. Introducing non-linear aspects in the network definition	127
3.2.3. Solving the minimum cost flow problem	132
3.2.4. Application to the water resources scheme of the Duero River	134
3.2.5. Concluding remarks	144
3.3. Incorporation of the conjunctive surface-groundwater component into a multi-period network flow based optimization model	145
3.3.1. New formulation of the generalized optimization model	148

3.3.2.	Network construction approach for aquifers and design of the iterative process	154
3.3.3.	Resolution of the network and setback-stepwise approach for long term optimization horizons	160
3.3.4.	Validation of the results. Application to the Sorbe River case study	162
3.3.5.	Concluding remarks	174
3.4.	Assessment of risk with optimal management of water resources systems for decision making support during drought situations	174
3.4.1.	Design of a risk assessment process including WRS management optimization model	177
3.4.2.	Application to the Sorbe River case and analysis of the results	183
3.4.3.	Conclusive remarks	189
3.5.	Incorporation of the new developments into a decision support system shell	190
3.5.1.	Water resources management optimization model OPTIGES	190
3.5.2.	Model for risk assessment based in optimal operation of systems OPTIRISK	191
3.6.	Final remarks	192
	Chapter 4: Application of the new developments	199
4.1.	Introduction	200
4.2.	Case 1: Review of the drought indicators system in the Orbigo River basin	201
4.2.1.	The Orbigo River, a within-year regulated system	202
4.2.2.	Current drought monitoring and early warning in the Orbigo River basin. Limitations.	204
4.2.3.	Enhancement of drought preparation with the support of risk assessment methods	208
4.3.	Case 2: Conjunctive drought risk assessment of the Jucar and Turia River basins	225
4.3.1.	The Jucar and Turia River basins	225
4.3.2.	Drought monitoring in the Jucar and Turia River basins	231
4.3.3.	Complementary use of drought risk assessment methods and the existing drought indicators system	233
4.4.	Discussion of the results obtained	244
4.4.1.	On the cases of study	244
4.4.2.	On risk based management of water resources systems	249
	Chapter 5: Summary and conclusions	255
5.1.	Summary	255
5.2.	Conclusions	258
5.3.	Future research lines	264
	References	269
	ANNEX: Dissemination works	293
A.1.	Indexed journal articles	293
A.1.1.	A model for solving the optimal water allocation problem in river basins with network flow programming when introducing non-linearities.	293
A.1.2.	Methodology for Drought Risk Assessment in Within-year Regulated Reservoir Systems. Application to the Orbigo River System (Spain)	317
A.2.	Participation in conferences	342
A.2.1.	Incorporating aquifer modeling into a multi-period network flow programming optimization model for water resources management	342

A.2.2. Optimal management of the Jucar River and Turia River basins under uncertain drought conditions	354
A.2.3. Current and future drought vulnerability assessment in the Jucar River basin (Spain)	369
