Abstract	xi
Resumen	xiii
Resum	xv
1 INTRODUCTION	1
1.1 Microwave Filters and Multiplexers	2
1.2 Circular-Waveguide Dual-Mode Filters	2
1.2.1 Physical Structure and Operation	2
1.2.2 Design of Circular-Waveguide Dual-Mode Filters: State of the Art	3
1.3 Waveguide Manifold-Coupled Multiplexers	4
1.3.1 Physical Structure and Operation	5
1.3.2 Design of Waveguide Manifold-Coupled Multiplexers: State of the Art	6
1.4 Thesis Outline	7
References	9

2	DESIGN OF CIRCULAR-WAVEGUIDE DUAL-MODE FILTERS USING DISTRIBUTED MODELS	13
2.1	Background	14
2.2	Synthesis of the Lumped Model	14
2.3	Synthesis of the Distributed Model	16
2.3.1	Modeling the Transmission Lines	18
2.3.2	Simplification of the Model	20
2.4	Determination of the Physical Dimensions	23
2.4.1	Iris Dimensions	24
2.4.2	Dimensions of Cavities and Screws	26
2.5	Design of Dual-Mode Filters of Other Orders	29
2.5.1	Five-Pole Filters	29
2.5.2	Six-Pole Filters	31
2.5.3	Eight-Pole Filters with Symmetric Structure	32
2.5.4	Eight-Pole Filters with Asymmetric Structure	34
2.5.5	Ten-Pole Filters	36
2.5.6	Twelve-Pole Filters with Symmetric Structure	37
2.5.7	Twelve-Pole Filters with Asymmetric Structure	39
2.6	Reconfiguration of the Folded Coupling Matrix	41
2.6.1	Folded Form of the Coupling Matrix	41
2.6.2	Rotations of the Coupling Matrix	42
2.6.3	The Even-Mode Coupling Matrices	43
2.6.4	CM Reconfiguration for Six-Pole Filters	43
2.6.5	CM Reconfiguration for Symmetric Eight-Pole Filters	44
2.6.6	CM Reconfiguration for Asymmetric Eight-Pole Filters	44
2.6.7	CM Reconfiguration for Ten-Pole Filters	45
2.6.8	CM Reconfiguration for Symmetric Twelve-Pole Filters	45
2.6.9	CM Reconfiguration for Asymmetric Twelve-Pole Filters	46
2.7	Design Examples	52
2.7.1	Four-Pole Filter	52
2.7.2	Symmetric Eight-Pole Filter	55
	References	59
3	CORRECTION OF MANUFACTURING DEVIATIONS IN CWDM FILTERS WITHOUT TUNING SCREWS	61
3.1	Background	62
3.2	Manufactured Prototype	62
3.3	Space Mapping Technique	64

3.3.1	Fine and Coarse Models	64
3.3.2	Space Mapping Parameters	65
3.3.3	Formulation	66
3.4	Correction Process	66
3.5	Results	67
3.6	Practical Considerations	70
3.6.1	Minimum Penetrations in the Insertion Pieces	70
3.6.2	Alignment Pins	71
3.6.3	Manufacturing Tolerances in the SM Pieces	71
3.6.4	Correction Capability of the Insertion Pieces	72
References		73
4	DESIGN OF MANIFOLD MULTIPLEXERS WITH CWDM FILTERS USING DISTRIBUTED MODELS	75
4.1	Background	76
4.2	Synthesis of the Lumped Model	76
4.2.1	Lumped Model of the Individual Filters	76
4.2.2	Multiplexer with the Lumped Model of the Filters	77
4.3	Synthesis of the Distributed Model	79
4.4	Extraction of the Physical Dimensions	81
4.4.1	Individual Filters	82
4.4.2	Manifold Waveguide Sections and Stubs	83
4.4.3	Complete Multiplexer	83
4.5	Design Examples	83
4.5.1	Non-Contiguous Channel Multiplexer	83
4.5.2	Contiguous Channel Multiplexer	92
References		101
5	DESIGN OF A WIDEBAND MANIFOLD MULTIPLEXER WITH RECTANGULAR WAVEGUIDE FILTERS	103
5.1	Background	104
5.2	General Description	104
5.3	Design Specifications	104
5.3.1	Frequency Specifications	104
5.3.2	Power and Attenuation Specifications	106
5.4	Configuration of the Multiplexer and the Channel Filters	106
5.5	Design Procedure	107
5.5.1	Design of the Low-Order EM Model	109

5.5.2	Obtaining the Full-Wave EM Model	112
5.6	Pre-Manufacturing Tests	115
5.6.1	Material Choice	115
5.6.2	Tolerance Analysis	117
5.6.3	Insertion Losses	118
5.6.4	Comparison with Other EM Solver	119
5.6.5	Power-Handling Capability	119
5.7	Fabrication and Measurements	122
5.7.1	Manufactured Device	122
5.7.2	Measurements with a Virtual Network Analyzer	122
5.7.3	Measurements with a Spectrum Analyzer	124
5.7.4	Power-Handling Capability	125
5.7.5	Final Purpose: PIM Measurements	125
References		127
6	CONCLUSIONS AND FUTURE WORK	129
6.1	Thesis Summary	130
6.2	Recommendation for Future Work	131
6.2.1	Application of the Design Methods to Other Filter Structures	131
6.2.2	Application of the Correction Technique to Other Filter Structures	131
6.2.3	Correction of Manufacturing Deviations in Multiplexers	132
6.2.4	Automation of the Multiplexer Design Procedure	132
A	AN AUTOMATIC SOFTWARE TOOL TO DESIGN CWDM FILTERS	133
A.1	Design Capabilities	134
A.2	Graphical User Interface	135
A.3	Computational Efficiency	137
B	DESIGN OF DOUBLY AND SINGLY TERMINATED FILTER NETWORKS	139
B.1	Doubly and Singly Terminated Filter Networks	140
B.1.1	Doubly Terminated Networks	140
B.1.2	Singly Terminated Networks	140
B.2	Polynomial Forms of the Transfer and Reflection Parameters	141
B.3	Calculation of the $[ABCD]$ and $[Y]$ Polynomial Matrices	142
B.3.1	Doubly Terminated Networks	142

B.3.2	Singly Terminated Networks	143
B.4	Synthesis of the Folded Coupling Matrix	145
