

Table of Contents

1.	Background	1
2.	Introduction	3
3.	State of the Art	7
3.1.	Road Safety	7
3.1.1.	Concurrent factors	9
3.1.1.1.	Infrastructure factor	13
3.1.1.2.	Human factor	14
3.1.1.3.	Vehicle factor	14
3.1.1.4.	Traffic factor	14
3.1.1.5.	Environment factor	17
3.1.2.	Road Safety theories.....	17
3.1.3.	Road Safety measurement and estimation	20
3.1.3.1.	Crash rates	20
3.1.3.2.	Statistical treatment of road safety	24
3.1.3.2.1.	Data and methodological issues	25
3.1.3.2.2.	Modeling methods for analyzing crash-frequency data	27
3.1.3.3.	Tools to estimate and assess road safety	31
3.1.3.3.1.	Safety Performance Functions.....	31
3.1.3.3.2.	Before/After studies	33
3.1.3.3.3.	Crash Modification Factors.....	34
3.1.3.3.4.	Empirical Bayes Method	36
3.1.4.	Road Safety Programs.....	38
3.1.4.1.	Spain	38
3.1.4.2.	European Union	41

3.1.4.3.	Worldwide	43
3.2.	Human factor. Traffic psychology	45
3.2.1.	The driving task.....	45
3.2.1.	Visual perception	47
3.2.2.	Experience and learning. Hazard perception.....	48
3.2.3.	Information processing models	50
3.2.4.	Attention. Driving workload	52
3.2.5.	Theories and models of driver behavior.....	55
3.2.5.1.	Rational decision making models	55
3.2.5.2.	Motivational models.....	58
3.2.5.2.1.	Risk minimization and risk compensation theories	58
3.2.5.2.2.	Risk homeostasis model	59
3.2.5.3.	Integrative models.....	60
3.3.	Road design	61
3.3.1.	Speed concepts.....	61
3.3.1.1.	Design speed.....	61
3.3.1.2.	Operating speed	66
3.3.2.	Road safety consideration in the design process	68
3.3.2.1.	Road safety in the guidelines.....	68
3.3.2.2.	Highway Safety Manual (HSM)	71
3.3.2.3.	Interactive Highway Safety Design Model (IHSDM).....	73
3.3.3.	Road segmentation.....	75
3.3.4.	Recreation of the road geometry	77
3.3.4.1.	Centerline data extraction	78
3.3.4.2.	Road alignment extraction	79
3.3.4.2.1.	Spline application	80
3.3.4.2.2.	Threshold-based detection of road geometric features.....	81

3.3.4.2.3.	Analytic solutions.....	82
3.4.	Infrastructure factor and its relation to human factor	85
3.4.1.	Driver behavior according to road geometry	85
3.4.1.1.	Curve negotiation	86
3.4.1.2.	Longitudinal behavior. Operating speed	89
3.4.1.2.1.	Operating speed estimation on horizontal curves	94
3.4.1.2.2.	Operating speed estimation on tangents	101
3.4.1.2.3.	Operating speed variation and acceleration/deceleration rates.....	103
3.4.1.2.4.	Operating speed profiles	107
3.4.2.	Road safety estimation depending on road design	122
3.4.2.1.	Cross-section and roadside conditions	126
3.4.2.2.	Number of intersections and driveways.....	129
3.4.2.3.	Speed limit	129
3.4.2.4.	Pavement conditions	130
3.5.	Road design consistency.....	133
3.5.1.	Operating speed methods	134
3.5.1.1.	Local evaluation methods.....	136
3.5.1.1.1.	Comparison of design and operating speeds	137
3.5.1.1.2.	Comparison of the operating speed of consecutive geometric features	139
3.5.1.2.	Inertial evaluation methods.....	143
3.5.1.2.1.	Consistency density index.....	143
3.5.1.2.2.	Inertial Consistency Index.....	145
3.5.1.3.	Global consistency evaluation	145
3.5.2.	Vehicular stability	150
3.5.2.1.	Comparison between demanded and assumed side friction	153
3.5.2.2.	Models based on the kinetic energy.....	155
3.5.2.3.	Safety margin methods.....	156

3.5.3.	Alignment Indices	158
3.5.4.	Driver workload	161
3.5.4.1.	Visual Demand methods.....	163
3.5.4.2.	Qualitative scale methods	166
3.5.4.3.	Psychophysiological measurement.....	168
3.5.5.	Other methods	168
3.5.5.1.	Checklists	168
3.5.5.2.	Combined models.....	168
3.5.5.3.	Global Criteria.....	170
3.5.6.	Implementation of the consistency into the road design process	171
3.6.	Limitations of the current knowledge	172
4.	Objectives	175
5.	Hypotheses	177
6.	Methodology	179
6.1.	Data acquisition	180
6.2.	Development of the operating speed models	183
6.3.	Determination of the centerline coordinates.....	186
6.3.1.	Input data	186
6.3.2.	Calculation of the merged path	188
6.4.	Determination of the horizontal alignment.....	196
6.4.1.	Analysis of the local curvature.....	197
6.4.1.1.	Creation of the seed curvature profile	198
6.4.1.2.	Application of the gradient method	201
6.4.1.3.	Filtering of the low curvature values	203
6.4.1.4.	Longitudinal analysis.....	204
6.4.2.	Restitution of the horizontal alignment	205
6.4.2.1.	Use of the heading for geometric restitution	205

6.4.2.2.	Assessment of the error of curvature and heading parameters	207
6.4.2.3.	General formulation and solution of the problem	212
6.4.2.3.1.	Isolated curve	215
6.4.2.3.2.	Isolated curve without spiral transitions	224
6.4.2.3.3.	Reverse and broken-back curves with tangents	226
6.4.2.3.4.	Series of n curves	230
6.4.2.3.5.	Reverse and broken-back curves without tangents	231
6.4.2.3.6.	Compound curves	240
6.4.2.3.7.	Tangent-to-curve transition.....	246
6.4.2.3.8.	Curve-to-tangent transition.....	247
6.4.2.3.9.	Tangent adjustment.....	248
6.4.2.3.10.	Circular curve adjustment	249
6.4.3.	Determination of the horizontal alignment.....	249
6.4.4.	Genetic Algorithms to improve the final solution	251
6.5.	Determination of the operating speed profiles	254
6.6.	Road segmentation.....	255
6.6.1.	Major junctions.....	255
6.6.2.	Geometry.....	256
6.6.3.	Operation.....	256
6.6.4.	Determination of the homogeneous road segments	258
6.7.	Calibration of the consistency parameter	259
6.8.	Computer application	263
7.	Development	270
7.1.	Selection of road segments	270
7.2.	Determination of the homogeneous segments.....	273
7.2.1.	Determination of the horizontal alignment.....	273
7.2.2.	Determination of the operating speed profiles	274

7.2.3.	Road segmentation.....	275
7.3.	Determination of the input data	281
7.3.1.	AADT	281
7.3.2.	Number of accidents.....	287
7.3.3.	Operational parameters	292
7.4.	Calibration of the Consistency Parameter	300
7.4.1.	Determination of the functional form	300
7.4.2.	Determination of the exposure influence	301
7.4.3.	Calibration with one parameter	302
7.4.4.	Calibration with two parameters.....	305
7.5.	Estimation of the number of accidents	319
7.6.	Determination of the consistency thresholds	320
8.	Discussion	323
8.1.	Recreation of the geometry.....	323
8.1.1.	Data collection	323
8.1.2.	Advantages of the proposed methodology and comparison to other methods	325
8.2.	Analysis of the consistency parameter and its relationship with road crashes.....	331
8.2.1.	Effect of the road length.....	335
8.2.2.	Effect of the AADT	337
8.2.3.	Effect of the consistency parameter.....	339
8.2.3.1.	Interaction between the average operating speed and the average deceleration rate	341
8.2.3.2.	Speed reduction threshold	346
8.2.3.3.	Design consistency thresholds.....	347
8.3.	Validation of the consistency model	349
8.4.	Comparison to other global consistency models.....	352
8.5.	Road segmentation.....	361
8.6.	Implications for road design	368

8.6.1.	Clustering of types of roads according to their operating/crash rate behavior	368
8.6.2.	Analysis of the operating speed and surrogate measures.....	371
8.6.3.	Application to the Spanish guidelines.....	376
8.6.3.1.	General design	376
8.6.3.2.	Operating speed	377
8.6.3.3.	Design speed.....	377
8.6.3.4.	Stopping Sight distance	378
8.6.3.5.	Consistency.....	379
8.7.	Proposal of a new road design process	379
8.7.1.	Design of a new road	379
8.7.2.	Redesign of an existing road.....	383
8.7.3.	Planning stage.....	385
9.	Applications	387
9.1.	Geometric recreation of the alignment of a road segment.....	387
9.2.	Segmentation of existing and planned road sections.....	387
9.3.	Development of operating speed profiles.....	388
9.4.	Calculation of the design consistency of existing and planned road segments	388
9.5.	Safety Performance Function for two-lane rural road segments	389
9.6.	Introduction of a new process for road design, redesign and planning	389
10.	Conclusions	391
10.1.	Development of a methodology to recreate the horizontal alignment	391
10.2.	Development and validation of a segmentation methodology for existing and planned road sections.....	392
10.3.	Development and analysis of operating speed parameters	392
10.4.	Development of a consistency model for road segments	393
10.5.	Development of a new road design process that gathers all improvements provided by the research.....	394
11.	Further research	395
11.1.	Segmentation process	395

11.2.	New design process	395
11.3.	Recreation of the road geometry	395
11.4.	Development of new and better operating speed models.....	396
11.5.	Analysis of the operating speed dispersion and its relationship to road crashes	397
11.6.	Analysis of the curve negotiation by drivers.....	397
11.7.	Development of enhanced safety performance functions.....	397
12.	Acknowledgements	399
13.	References	401
14.	Conclusion	419
I.	Published and accepted papers	421
II.	Road sections.....	551
III.	Road homogeneous segments	617
IV.	Statistical adjustments.....	777
