PART I NONLINEAR WAVES IN LATTICES _____	1
Chapter 1 Localized nonlinear waves in lattices	3
1.1 Motivation: dynamics of potassium ions in layered silicates	4
1.2 Minimal model with realistic potentials	7
1.3 Tail analysis	10
1.4 Supersonic ultra-discrete kinks.	13
1.5 Interaction with several neighbours	23
1.6 The effect of nuclear repulsion: kinks with short-range ZBL potential . .	26
1.7 The effect of the substrate potential: lattice kinks or crowdions	28
1.8 Some numerical simulations with ultradiscrete kinks or crowdions	37
1.9 Conclusions	40
Chapter 2 Nonlinear acoustic waves in layered media	45
2.1 Introduction	46
2.2 Dispersion relations.	47
2.3 Full-wave model	50
2.4 Harmonic generation in layered media	57
2.5 Nonlinear acoustic field management	72
2.6 Dispersion managed acoustic solitons	90
2.7 Conclusions	99
PART II NONLINEAR SINGULAR BEAMS _____	103
Chapter 3 Nonlinear self-collimated sound beams in periodic media	105
3.1 Introduction	106
3.2 Nonlinear sound beam propagation model	108
3.3 Self-collimation of intense acoustic beams.	110
3.4 Numerical simulation.	114
3.5 Conclusions and Remarks	116

Chapter 4	Acoustic Bessel beams generated by axisymmetric gratings	121
4.1	Introduction	122
4.2	Generation of Zero th-order Bessel beams by axisymmetric gratings.	123
4.3	Experimental validation.	127
4.4	Conclusions	129
Chapter 5	Nonlinear focused beams by axisymmetric gratings	133
5.1	Introduction	134
5.2	Axisymmetric diffraction grating design	137
5.3	Small amplitude focusing.	138
5.4	Transition from linear-to-nonlinear focusing	144
5.5	High intensity regime	145
5.6	Conclusions	150
Chapter 6	Chiral beams generated by spiral gratings	153
6.1	Introduction	154
6.2	From axisymmetric to chiral beams	155
6.3	Chiral beams generated by spiral gratings.	158
6.4	High order Bessel beams generated by n -arm spirals	169
6.5	Weakly nonlinear chiral beams.	180
6.6	Conclusions	184
PART III NONLINEAR ACOUSTIC WAVES IN BIOLOGICAL MEDIA		189
Chapter 7	Time-domain nonlinear acoustic wave modelling of soft-tissue media	191
7.1	Introduction	192
7.2	Generalized nonlinear acoustics model for multiple relaxation media	197
7.3	Numerical solution by finite differences in time domain	200
7.4	Validation.	206
7.5	Results.	210
7.6	Summary	222
Chapter 8	Nonlinear plane waves in frequency power law attenuation media	229
8.1	Introduction	230
8.2	Nonlinear coherence length	233
8.3	Competition between nonlinearity and power law attenuation and dispersion	236
8.4	Plane wave simulations in power law media	238
8.5	Nonlinear efficiency	242

8.6 Phase changes induced by dispersion	244
8.7 Conclusions	247

Chapter 9 Nonlinear acoustic radiation forces in biological media **251**

9.1 Introduction	252
9.2 One dimensional acoustic radiation force	254
9.3 Nonlinear radiation force in tissue-like media	258
9.4 Power law dependence	262
9.5 Relation of nonlinear absorption and tissue heating rate	263
9.6 Conclusions	269

Index of terms **272**
