Contents . . . . .	IV
Resumen . . . . .	VII
Resum . . . . .	IX
Abstract . . . . .	XI
List of Publications . . . . .	XIII
<b>1 Introduction</b>	<b>1</b>
1.1 Derivatives markets and options . . . . .	1
1.2 Stochastic processes . . . . .	2
1.2.1 Poisson process . . . . .	3
1.2.2 Gaussian process . . . . .	3
1.2.3 Brownian motion . . . . .	3
1.2.4 Itô process . . . . .	4
1.2.5 Lévy process . . . . .	5
1.3 The Black Scholes equation . . . . .	5
1.4 Preliminaries on numerical analysis . . . . .	6
1.4.1 Convergence . . . . .	6
1.4.2 Stability . . . . .	7
1.4.3 Consistency . . . . .	9
<b>2 Positive solutions of European option pricing with CGMY process models using double discretization difference schemes</b>	<b>11</b>
2.1 Introduction . . . . .	11
2.2 Transformation of the PIDE problem . . . . .	15
2.3 Numerical Scheme Construction . . . . .	18
2.3.1 The numerical scheme that guarantee unconditionally consistency . . . . .	18
2.3.2 The numerical scheme based on Patankar-trick . . . . .	22

2.4	The properties of the numerical solution . . . . .	25
2.4.1	Positive and stability of the numerical solution for scheme 1 . . . . .	25
2.4.2	Positive and stability of the numerical solution for scheme 2 . . . . .	27
2.5	Consistency . . . . .	28
2.5.1	The consistency for scheme 1 . . . . .	28
2.5.2	The consistency for scheme 2 . . . . .	31
2.6	Numerical examples . . . . .	33
2.6.1	Examples for scheme 1 . . . . .	33
2.6.2	Examples for scheme 2 . . . . .	36
<b>3</b>	<b>Solving partial integro-differential option pricing problems for a wide class of infinite activity Lévy processes</b>	<b>41</b>
3.1	Introduction . . . . .	41
3.1.1	Gauss quadrature approximation . . . . .	44
3.2	Scheme construction for European options . . . . .	45
3.3	Numerical Analysis for European Options . . . . .	49
3.4	American options under Lévy models . . . . .	53
3.5	Numerical Examples . . . . .	56
<b>4</b>	<b>Positive finite difference schemes for partial integro-differential option pricing</b>	
	<b>Bates model</b>	<b>65</b>
4.1	Introduction . . . . .	65
4.2	Problem Transformation and Scheme Construction . . . . .	68
4.2.1	The transformation of the problem . . . . .	68
4.2.2	The numerical scheme . . . . .	70
4.3	Numerical properties of the scheme . . . . .	75
4.3.1	Positivity of the solution . . . . .	75
4.3.2	Stability of the scheme . . . . .	77
4.4	Consistency . . . . .	78
4.5	Numerical solution of PIDE American option pricing under Bates model . . . . .	81
4.5.1	Numerical scheme construction . . . . .	82
4.6	Numerical Examples . . . . .	83
	<b>Conclusions</b>	<b>88</b>
	<b>Bibliography</b>	<b>88</b>

# List of Figures

2.1	The effect of positivity conditions on $V$ . . . . .	33
2.2	The effect of positivity conditions on $V$ . . . . .	34
2.3	The associated error for various values of $h$ . . . . .	35
2.4	The associated error for several values of $\delta$ . . . . .	36
2.5	The effect of consistency condition on $V$ . . . . .	36
2.6	The associated error for several values of $\delta$ . . . . .	39
2.7	The Greeks for European call option. . . . .	39
3.1	About positivity condition of the explicit scheme under CGMY process. . . . .	57
3.2	The positivity condition of the explicit scheme under Meixner process. . . . .	58
3.3	The effect of positivity condition on the option price under GH process. . . . .	59
3.4	The amplification factor $G$ under stability condition. . . . .	62
4.1	Rhomboid numerical domain $ABCD$ . . . . .	70
4.2	The effect of positivity conditions on the option price $U$ . . . . .	84

# List of Tables

2.1	Errors and convergence rates. . . . .	34
2.2	Errors due to the variation of $\varepsilon$ . . . . .	35
2.3	Errors and convergence rates due to the change of $h$ for VG. . . . .	37
2.4	Errors and convergence rates due to the change of $k$ for VG. . . . .	37
2.5	The associated errors for several values of $\varepsilon$ for VG. . . . .	38
2.6	Comparison of errors and convergence rates due to the change of $h$ for CGMY model. . . . .	38
2.7	Comparison of errors due to the variation of $\varepsilon$ for CGMY model. . . . .	38
3.1	The forms of $\nu(y)$ . . . . .	42
3.2	The parameters for Lévy models used in Example 3.1. . . . .	57
3.3	Computed negative values with the three-level method. . . . .	58
3.4	Errors and convergence rates for the VG model for several values of $N_x$ . . . . .	59
3.5	Errors and convergence rates for the VG model for various values of $N_\tau$ . . . . .	60
3.6	The reference European option values under Lévy processes. . . . .	60
3.7	The parameters for Lévy models used in Example 3.3. . . . .	60
3.8	Comparison of Scheme errors and CPU times for European option . . . . .	61
3.9	The Truncated error for the integral part . . . . .	61
3.10	The RMSRE for American option under Lévy processes . . . . .	63
3.11	The reference American option values. . . . .	63
4.1	The associated RMSRE for several values of $N_\tau$ . . . . .	85
4.2	The RMSRE for different values of $(N_x, N_y)$ . . . . .	85
4.3	The RMSRE for several values of $N_\tau$ . . . . .	86
4.4	The associated RMSRE for different values of $(N_x, N_y)$ . . . . .	86
4.5	Comparison of Scheme errors and CPU times for American option when $\rho = -0.5$ . . . . .	86
4.6	Comparison of Scheme errors and CPU times for American option when $\rho = 0.5$ . . . . .	87
