Contents

1 Introduction **1**
- 1.1 Motivation . . . 3
- 1.2 Objectives . . . 4
- 1.3 Main contributions . . . 5
- 1.4 Thesis framework . . . 6
- 1.5 Outline . . . 7

2 The retina **11**
- 2.1 Retina's anatomy . . . 13
- 2.2 Pathologies related to the retina . . . 15
  - 2.2.1 Hypertensive retinopathy . . . 15
  - 2.2.2 Diabetic retinopathy . . . 18
  - 2.2.3 Age-related macular degeneration . . . 20
  - 2.2.4 Glaucoma . . . 21
- 2.3 Relevant groups . . . 23

3 Retinal structure characterization **27**
- 3.1 Introduction . . . 31
- 3.2 Theoretical background . . . 34
  - 3.2.1 Morphological operators . . . 34
  - 3.2.2 Stochastic watershed transformation . . . 39
- 3.3 Vessel segmentation . . . 43
  - 3.3.1 Vessel extraction . . . 45
  - 3.3.2 Centerline extraction . . . 50
- 3.4 Significant points . . . 56

3.4.1 Terminal and bifurcation points . . . 58
3.4.2 Crossing points . . . 60
3.5 Optic disk segmentation . . . 63
3.5.1 Pre-processing . . . 66
3.5.2 Processing . . . 71
3.5.3 Post-processing . . . 78
3.6 Application to pathology detection: Hypertensive risk . 79
3.6.1 Pre-processing . . . 80
3.6.2 Processing . . . 82
3.6.3 Post-processing . . . 82
3.7 Results . . . 85
3.7.1 Material . . . 85
3.7.2 Retinal vessel segmentation . . . 88
3.7.3 Retinal vessel centerline . . . 93
3.7.4 Optic disk . . . 97
3.7.5 Computer-aided diagnosis software for hypertensive risk determination . . . 112
3.8 Conclusions . . . 115

4 Retina background characterization **117**
4.1 Introduction . . . 121
4.2 Theoretical background . . . 123
4.3 Application to pathology detection: Diabetic retinopathy and age-related macular degeneration . . . 126
4.3.1 General description . . . 126
4.3.2 Feature extraction . . . 126
4.3.3 Classification . . . 127
4.4 Results . . . 132
4.4.1 Material . . . 132
4.4.2 Experiments . . . 136
4.5 Conclusions . . . 141

5 Conclusions **143**

Merits **147**

Bibliography **151**
