1	Introduction	1
1.1	Motivation	2
1.2	Objectives	3
1.3	Document Organization	5
2	Background on Shape Matching	7
2.1	Classification	8
2.2	Input data	8
2.2.1	Dimensionality	8
2.2.2	Shape representation	9
2.2.2.1	Feature detectors	10
2.2.2.2	Descriptors	12
2.3	Output match	21
2.3.1	Correspondence representation	21
2.3.2	Full and partial correspondences	22
2.3.3	Dense and Sparse correspondences	23
2.4	Cost function	23
2.4.1	General distance metrics	23
2.4.2	Rigid alignment	25
2.4.3	Non-rigid alignment	26
2.4.4	Similarity-based correspondence	26
2.5	Search strategy	27
2.5.1	Properties of existing search strategies	27
2.5.2	Solution paradigm	29
2.5.2.1	Transformation and alignment search	29
2.5.2.2	Correspondence search	31
2.5.2.3	Hybrid search: ICP	32

3	Background on Automatic Fragment Reconstruction	35
3.1	Jigsaw Puzzles	36
3.2	Contour Matching Techniques	37
3.3	Surface Matching	38
3.4	Multi-Feature Matching	39
3.5	Multi-Piece Matching	40
4	Acquisition	43
4.1	2D acquisition	44
4.2	3D acquisition	45
4.2.1	Residuals Analysis	47
4.2.2	Electronic Microscope Analysis	52
4.2.3	Sublimation speed	52
4.2.4	Conclusion	54
5	3 Degrees of Freedom Approach	57
5.1	Overview	58
5.2	Cost Function and Solution Space	59
5.3	Pre-Processing	60
5.4	Search Strategy	63
5.4.1	Exhaustive Search	63
5.4.2	Hierarchical Orientations	66
5.4.3	Hierarchical Displacements	70
5.4.4	Hierarchical Search	73
5.4.5	Many-to-Many Search	74
5.5	Results	76
5.5.1	Performance evaluation	76
5.5.2	Griphos dataset	80
5.5.3	Many-to-many sample implementation	84
5.6	Conclusions and Future Work	85
6	6 Degrees of Freedom Approach	87
6.1	Overview	88
6.2	Pre-processing	90
6.2.1	Feature extraction	90
6.2.2	Keypoint selection	95
6.2.3	Descriptor calculation	97
6.3	One-to-one search strategy	100
6.3.1	Local similarity	100
6.3.2	Geometric consistence	101
6.3.3	Search strategy	103
6.4	Many-to-many search strategy	105
6.5	Results	109
6.5.1	Pre-processing	109
6.5.2	One-to-one search	113
6.5.3	Many-to-many search	120
6.6	Conclusions and Future Work	122

7	Applications to Self-localization problems	123
7.1	Fast Indoor Localization for Mobile Robots	123
7.1.1	Overview	124
7.1.2	Calibration	125
7.1.3	Segmentation	125
7.1.3.1	Data acquisition	126
7.1.3.2	Line inference	126
7.1.3.3	Line filtering	129
7.1.3.4	Corner extraction	130
7.1.4	Localization	131
7.1.4.1	Matching calculation	131
7.1.4.2	Cost function	133
7.1.5	Results	133
7.1.6	Conclusions and Future Works	137
7.2	Indoor Localization for Inspection and Verification	137
7.2.1	Overview	138
7.2.2	The Sensors	139
7.2.2.1	The Kinect Sensor	139
7.2.2.2	The Velodyne Sensor	142
7.2.3	Kidnapped Robot Solver	143
7.2.4	Tracking and Relocalizing Algorithms	148
7.2.4.1	Real-time ICP algorithm	148
7.2.4.2	Tracking	152
7.2.4.3	Relocalization	154
7.2.5	Parameter Optimization	155
7.2.5.1	Tracking lost detection	156
7.2.5.2	Relocalization test	157
7.2.5.3	Optimization framework	158
7.2.6	Results	159
7.2.7	Conclusions and Future Works	164
8	Conclusions	167
	Bibliography	169
A	6 DOF One-to-One results	185
A.1	Brick dataset	185
A.2	Venus dataset	187
A.3	Cake dataset	189
A.4	Sculpture dataset	191
A.5	Gargoyle dataset	193
