

## INDEX

<b>I. INTRODUCTION</b> .....	1
I.1. Origin, Botany and Morphology.....	3
I.2. Production and Economic value.....	7
I.2.1. Worldwide production.....	7
I.2.2. The importance of persimmon crop in the Mediterranean region.....	9
I.2.3. Evolution of the persimmon crop in the Valencian Community. Importance of variety ‘Rojo Brillante’.....	11
I.3. Fruit Development and Maturity .....	14
I.3.1. Physicochemical changes during fruit growth and maturation.....	14
I.3.2. Changes in the soluble tannins responsible for astringency.....	15
I.3.3. Quality at harvest and phytonutrients.....	18
I.4. Postharvest Physiology and Technology.....	20
I.4.1. Removing astringency.....	21
I.4.2. Storage.....	25
I.4.2.1. Chilling injury.....	25
I.4.2.2. Treatments to alleviate chilling injury.....	27
I.4.3. Packaging operations .....	33
I.4.4. Controlling pathological diseases and insect pests.....	34
I.4.4.1. Fungal diseases and their control.....	35
I.4.4.2. Insect pest and their control.....	37
<b>II. OBJECTIVES</b> .....	57
<b>III. RESULTS AND DISCUSSION</b> .....	61
III.1. INVOLVEMENT OF OXIDATIVE STRESS IN PHYSIOLOGICAL DISORDERS OF PERSIMMON FRUITS.....	63
<b>CHAPTER I:</b>	
Effect of CO <sub>2</sub> deastringency treatment on flesh disorders induced by mechanical damage in persimmon. Biochemical and microstructural studies.....	65
Reference: <i>Food Chemistry</i> , 2014, 145: 454-463.	

## CHAPTER II:

Sensitivity of astringent and non-astringent persimmon cultivars to flesh disorders induced by mechanical damage ..... 99

Reference: *Acta Horticulturae*, 2015, 1079: 605-610.

## CHAPTER III:

Deastringency treatment with CO<sub>2</sub> induces oxidative stress in persimmon fruit ..... 113

Reference: *Postharvest Biology and Technology*, 2014, 92: 16-22

## CHAPTER IV:

Involvement of the redox system in chilling injury and its alleviation by 1-methylcyclopropene in 'Rojo Brillante' persimmon ..... 139

Reference: *HortScience*, 2015, 50: 570-576

III.2. EVALUATION OF POSTHARVEST TREATMENTS TO IMPROVE FRUIT QUALITY DURING COLD STORAGE ..... 163

## CHAPTER V:

Effect of a low oxygen atmosphere on preserving the quality of 'Rojo Brillante' and 'Triumph' persimmon during cold storage ..... 165

Reference: *Scientia Horticulturae*, 2014, 179: 51-58

## CHAPTER VI:

Short-term high CO<sub>2</sub> treatment alleviates chilling injury of persimmon cv. Fuyu by preserving the parenchyma structure ..... 193

Reference: *Food Control*, 2015, 51: 163-170

## CHAPTER VII:

Response of 'Fuyu' persimmons to disinfesting ethyl formate fumigation and 1-MCP treatment..... 219

Reference: Submitted to *Postharvest Biology and Technology*

## CHAPTER VIII:

Is there a relationship between ethyl formate and ethylene biosynthesis in persimmon fruit?..... 239

Reference: *Pending submission*

III.3. PHYSIOLOGICAL AND NUTRITIONAL STUDY OF PERSIMMON CULTIVARS INTRODUCED FROM OTHER COUNTRIES IN ORDER TO BROADEN VARIETAL RANGE.....	265
---	-----

CHAPTER IX :

Fruit quality and response to destringency treatment of eight persimmon varieties cultivated under Spanish growing conditions.....	267
--	-----

Reference: *Acta Horticulturae*, 2013, 996: 437-442.

CHAPTER X :

Influence of persimmon astringency-type on physicochemical changes from the green stage to commercial harvest.....	281
--	-----

Reference: Submitted to *Journal of Food Composition and Analysis*

CHAPTER XI :

Nutritional composition of ten persimmon cultivars in the 'ready-to-eat crisp' stage. Effect of destringency treatment.....	307
---	-----

Reference: Submitted to *Food and Nutrition Sciences*

<b>IV. GENERAL DISCUSSION.....</b>	<b>333</b>
------------------------------------	------------

<b>V. GENERAL CONCLUSIONS.....</b>	<b>355</b>
------------------------------------	------------
