Resumen (en español)	3
Summary (in English)	5
Resum (en valencià)	7
Acknowledgements	9
Index	11
Index of Figures	17
Index of Tables	19
List of abbreviations	21
Chapter 1: Introduction, objectives and structure of the thesis	23
1.1. Interdepartmental approach and motivation	24
1.2. Introductory overview	25
1.3. General context and initial reviews	26
1.3.1. General context: types of poultry farm, amount and location of broiler production and comparison to other animal meat production	26
1.3.2. Poultry housing for broilers	28
1.3.3. Hot weather and cold weather. Climate change and uncertainty	29
1.3.4. Effects of cold temperatures and hot temperatures on broilers	30
1.3.5. Broiler housing ventilation: the main problem in Mediterranean climate and areas with climatic uncertainty. Introductory overview of cross and tunnel mechanical ventilation	31
1.3.6. (State of the art) Review of the literature, publications, main contributions and current methodologies to characterise indoor environments and ventilation patterns in broiler buildings. CFD, electronic instrumentation (sensors) and validation	32
1.4. General aim and specific objectives of this PhD dissertation	35
1.4.1 General aim	35
1.4.2. Specific objectives	36
1.5. Scope of the PhD dissertation	38
1.6. PhD dissertation structure	38
1.7. Published articles/conferences derived from this PhD dissertation.	
Awards	39
1.8. References	40

Chapter 2: Instrumentation to measure indoor environments at broiler houses	47
2.1. Introduction	49
2.2. Materials and Methods	52
2.2.1. Measurement System Development	52
2.2.1.1. General Description	52
2.2.1.2. Temperature Material and Circuit	53
2.2.1.3. Temperature Calibration	54
2.2.1.4. Air Velocity Material and Circuit	55
2.2.1.5. Air Velocity Calibration	56
2.2.1.6. Differential Pressure Module	59
2.2.2. Field Experiments	60
2.2.2.1. Assay Building	60
2.2.2.2. Measurement Conditions (Scenarios)	61
2.2.2.3. Statistical Procedures	63
2.3. Results and Discussion	63
2.3.1. Sensor Calibration	63
2.3.1.1. Temperature Calibration	63
2.3.1.2. Air Velocity Calibration	65
2.3.1.3. Differential Pressure Calibration	65
2.3.2. Field Experiment	66
2.3.3. Discussion	67
2.3.3.1. Measurement System Development	67
2.3.3.2. Field Experiments	69
2.4. Conclusions	71
2.5. References	71
Chapter 3: Cross mechanical ventilation in broiler houses	77
3.1. Introduction	79
3.2. Materials and Methods	81
3.2.1. Experimental Poultry Farm	81
3.2.2. Test Sections and Multi-sensor System for Direct Measurements	82
3.2.3. CFD Background	83
3.2.4. Turbulence Models and Boundary Conditions (BC)	84
3.2.5. Statistical Validation Model	90
3.3. Results and Discussion	91
3.3.1. CFD vs. Direct Measurements	91

3.3.2. CFD-Air Velocity Results	92
3.3.3. Results of the Validation Model	94
3.4. Conclusions	97
3.5. References	98
Chapter 4: Tunnel mechanical ventilation in broiler houses	101
4.1. Introduction	103
4.2. Materials and Methods	105
4.2.1. The Building	105
4.2.2. Experimental Scenarios (Operations)	106
4.2.3. CFD Background and Turbulence Models	107
4.2.4. Geometry, Mesh and BC	108
4.2.5. Validation of CFD Results	110
4.2.5.1. General Context: the Multi-Sensor System and Points of Measurement	110
4.2.5.2. Statistical Model and Variables	112
4.2.5.3. Regression Line (CFD vs. Measurements)	113
4.2.5.4. Relative Error at Each Point	113
4.3. Results	114
4.3.1. Results of the Validation Model	114
4.3.2. CFD Results and the Direct Measurements	115
4.3.3. Results of the Relative Error at Each Point	117
4.3.4. CFD-Air Velocity Results	119
4.4. Discussion	120
4.5. Conclusions	123
4.6. References	123
Chapter 5: Single-sided mechanical ventilation in broiler houses	127
5.1. Introduction	129
5.2. Materials and methods	130
5.2.1. Assay building	130
5.2.2. Fans, inlets and diffusers	131
5.2.3. Scenarios	132
5.2.4. Multi-sensor system and points of measurement	132
5.2.5. CFD techniques	133
5.2.6. Geometry, meshed and BC	134
5.2.7. Validation of CFD results	136

5.2.7.1. General context	136
5.2.7.2. Regression model comparing CFD vs. measurements, errors	136
5.2.7.3. ANOVA for validation	137
5.2.8. Characterisation of the ventilation model	137
5.3. Results	138
5.3.1. Regression line	138
5.3.2. ANOVA results of the validation Models	139
5.3.3. CFD numerical results in the sensor coordinates	140
5.3.4. CFD-air velocity isosurfaces	141
5.4. Discussion	146
5.5. Conclusions	149
5.6. References	150
Chapter 6: CFD applications in the heating and cooling systems of broiler houses: Designing a fogging system using CFD and sensors	155
6.1. Introduction	157
6.2. Materials and Methods	160
6.2.1. The building	160
6.2.2. Scenarios and field experimentation	160
6.2.3. Instrumentation and measurements	161
6.2.4. CFD techniques and General Validation	162
6.2.4.1. CFD-isosurfaces	163
6.2.4.2. CFD-air velocity at fog spray nozzles and pipes	163
6.2.5. Testing the final fogging system design.	
Additional CFD Validation	164
6.2.5.1. Testing the nozzles and determining the water in use in the fogging system	164
6.2.5.2. Additional CFD Validation. Comparing CFD air velocity results with direct measurements at nozzles	164
6.2.5.3. Number of fog spray nozzles tested.	
Sample size in finite populations	165
6.3. Results	166
6.3.1. CFD isosurfaces	166
6.3.2. Location of pipes and nozzle orientation	168
6.3.3. CFD-air velocity at the fog spray nozzles (points) and at pipes (lines)	170

6.3.4. Regression line of CFD-air velocity results and measurements in the studied fog spray nozzles	172
6.3.5. Water used in fogging system	174
6.4. Discussion	174
6.5. Conclusions	178
6.6. References	179
Chapter 7: General Results and Discussion	183
7.1. Introduction	184
7.2. General Discussion and Results	184
7.3. Achievement of the PhD dissertation's general aim and specific objectives. Acquisition of skills in the PhD dissertation	198
7.4. References	200
Chapter 8: Conclusions	205
8.1. Summary of brief statements and specific conclusions of each chapter	206
8.2. General conclusions	218
8.3. Future work	221
8.4. References	222
