<b>Abstract</b>	<b>i</b>
<b>Resumen</b>	<b>iii</b>
<b>Resum</b>	<b>v</b>
<b>List of symbols</b>	<b>xv</b>
<b>Abbreviations and Acronyms</b>	<b>xix</b>
<b>1 Introduction and Scope</b>	<b>1</b>
1.1 Background . . . . .	3
1.2 Motivation and objectives . . . . .	5
1.3 Organization of the thesis . . . . .	6
<b>2 Problem formulation and Fundamentals</b>	<b>9</b>
2.1 Room equalization . . . . .	11
2.1.1 Active compensation . . . . .	14
2.1.2 Sparsity degree . . . . .	15
2.2 Adaptive filtering algorithms . . . . .	16
2.2.1 Least mean-square algorithm . . . . .	16
2.2.2 Proportionated LMS algorithms . . . . .	18
2.2.3 Convex combination of adaptive filters . . . . .	19
2.3 Adaptive room equalization . . . . .	21
2.3.1 Filtered-x structure . . . . .	22
2.3.2 Adaptive equalization . . . . .	22
2.3.3 Frequency domain . . . . .	24
2.4 Nonlinear distortion . . . . .	26
2.4.1 p-order method . . . . .	29
2.5 MIMO systems . . . . .	31
2.5.1 Multichannel rendering techniques . . . . .	31
2.5.2 Multichannel equalization . . . . .	32
2.6 Performance measures . . . . .	34
2.6.1 Excess mean square error . . . . .	35

2.6.2	Normalized projection misalignment . . . . .	35
2.6.3	Subjective evaluation . . . . .	35
<b>3</b>	<b>Adaptive room equalization</b>	<b>37</b>
3.1	Single channel equalization . . . . .	39
3.2	Combined filtered-x scheme . . . . .	41
3.3	Biased filtered-x scheme . . . . .	46
3.3.1	Steady-State analysis of the biased filtered-x scheme	49
3.4	Multichannel room equalization . . . . .	53
3.5	Results . . . . .	58
3.5.1	Combination scheme . . . . .	58
3.5.2	Biased scheme . . . . .	61
3.5.3	Multichannel 1:2:2 system . . . . .	66
3.6	Conclusions . . . . .	72
<b>4</b>	<b>Block-based adaptive room equalization</b>	<b>73</b>
4.1	Block-based approach . . . . .	76
4.2	Block-based schemes . . . . .	77
4.2.1	Block-based convex combination of filtered-x schemes	77
4.2.2	Block-based biased filtered-x scheme . . . . .	83
4.2.3	Steady-state analysis of the BBFx-IPNLMS algorithm	86
4.3	Fitted block-based schemes. . . . .	90
4.3.1	Fitted CBFx and BBFx schemes. . . . .	90
4.3.2	Partitioned fitted-block schemes. . . . .	92
4.4	Computational Cost . . . . .	93
4.5	Results . . . . .	94
4.5.1	Block-based schemes. . . . .	95
4.5.2	Steady-state EMSE for unknown SNRs. . . . .	99
4.5.3	Fitted block-based biased filters. . . . .	101
4.5.4	EMSE behavior for different central-block lengths and sparsity degree. . . . .	103
4.5.5	Convex combination of partitioned fitted-block schemes	105
4.5.6	Convex Combination of fitted-block and BFX-NLMS Algorithms . . . . .	107
4.6	Conclusions . . . . .	109
<b>5</b>	<b>Nonlinear adaptive equalization</b>	<b>111</b>
5.1	Nonlinear system identification problem . . . . .	113
5.2	Nonlinear equalization problem . . . . .	116

---

5.2.1	Nonlinear loudspeaker and room equalization . . . . .	117
5.2.2	Virtual channel description . . . . .	121
5.3	Results . . . . .	122
5.3.1	Equalization with a high degree of nonlinearities . . . . .	125
5.3.2	Weakly nonlinear systems . . . . .	128
5.4	Conclusions . . . . .	130
<b>6</b>	<b>Conclusions</b>	<b>133</b>
6.1	Conclusions and future research . . . . .	135
6.2	List of publications . . . . .	139
<b>A</b>	<b>Real-time equalization</b>	<b>141</b>
A.1	Real time room equalization in frequency domain . . . . .	143
A.2	Laboratory experiments . . . . .	147
A.2.1	Laboratory setup . . . . .	148
A.2.2	Laboratory results . . . . .	149
<b>B</b>	<b>Direct multichannel equalization in a WFS system</b>	<b>155</b>
B.1	Wave Field Synthesis . . . . .	157
B.2	Application of MIMO room equalization to WFS reproduction systems . . . . .	160
B.3	Time-direct computation of the MIMO inverse system . . . . .	161
B.4	Frequency-direct computation of the MIMO inverse system . . . . .	163
B.5	Experimental setup . . . . .	164
B.6	Results . . . . .	165
B.6.1	Time-domain vs. frequency-domain performance . . . . .	166
B.6.2	Global inversion performance . . . . .	167
B.6.3	Subjective analysis . . . . .	170
	<b>Bibliography</b>	<b>173</b>
