

INDEX

INTRODUCTION

Antimicrobial edible films and coatings for fruit and vegetables. A review 3

OBJECTIVES 61

CHAPTER 1 65

Inhibition of *Penicillium digitatum* and *Penicillium italicum* by hydroxypropyl methylcellulose-lipid edible composite films containing food additives with antifungal properties

Reference: *J. Agric. Food Chem.* **2008**, 56, 11270-11278

CHAPTER 2 97

Curative and preventive activity of hydroxypropyl methylcellulose-lipid edible composite coatings containing food additives to control citrus postharvest green and blue molds

Reference: *J. Agric. Food Chem.* **2009**, 57, 2770-2777

CHAPTER 3 125

Effect of antifungal of hydroxypropyl methylcellulose (HPMC)-lipid edible composite coatings on postharvest decay development and quality attributes of cold-stored 'Valencia' oranges

Reference: *Postharvest Biol. Technol.* In Press.

CHAPTER 4 153

Effect of antifungal hydroxypropyl methylcellulose (HPMC)-lipid edible composite coatings on penicillium decay development and postharvest quality of cold-stored 'Ortanique' mandarins

Submitted to *Journal Agricultural Food Chemistry*.

CHAPTER 5	181
Performance of hydroxypropyl methylcellulose (HPMC)-lipid edible composite coatings containing food additives with antifungal properties during cold storage of ‘Clemenules’ mandarins	
Submitted to <i>Food Reserch International</i> .	
CHAPTER 6	211
Efecto del recubrimiento con quitosano en el ontrol de las podredumbres verde y azul de los cítricos	
Reference: “ <i>Avances en maduración y post-recolección de frutas y hortalizas</i> ”. p. 488-495. Eds. Oria R, Val J y Ferrer A. ISBN: 978-84-200-111-0. Editorial Acribia. Zaragoza.2008	
GENERAL DISCUSSION	225
GENERAL CONCLUSIONS AND FUTURE WORK	243
