| ABSTRACT | 11   |    |
| RESUMEN  | 15   |    |
| RESUM    | 19   |    |
| 1        | INTRODUCTION   | 23 |
| 1.1      | Regenerative Medicine  | 30 |
| 1.1.1    | Wound Healing.   | 33 |
| 1.1.2    | Biodegradable Polymeric Micro-particles for controlled delivery and tissue repair/regeneration   | 36 |
| 1.2      | Nanotechnology for Controlled Drug Delivery Systems and Tissue Engineering                       | 43 |
| 1.2.1    | Biodegradable Polymeric Membranes obtain by Electrospinning as scaffolds for tissue regeneration | 46 |
| 1.2.2    | Composite Polymeric scaffolds with Nanofibrous architecture                                      | 53 |
| 1.2.3    | Polymer therapeutics   | 56 |
| 2        | OBJECTIVES   | 80 |
| 2.1      | General Objective  | 80 |
| 2.1      | Specific Objectives  | 80 |
| 3        | MATERIALS AND EXPERIMENTAL TECHNIQUES  | 84 |
| 3.1      | Materials  | 84 |

|        |  |     |
|--------|--|-----|
| 3.1.1  | Polymers   | 84  |
| 3.1.1  | Model Drugs  | 89  |
| 3.1.2  | Model Protein  | 90  |
| 3.1.3  | Chemical reactive and solvents   | 91  |
| 3.2    | Experimental Techniques  | 93  |
| 3.2.1  | NMR Spectroscopy: <sup>1</sup> H and <sup>13</sup> C                   | 93  |
| 3.2.2  | UV Spectrophotometer   | 94  |
| 3.2.3  | Gel Permeation Chromatography (GPC)                                    | 95  |
| 3.2.4  | Reverse Phase High performance liquid chromatography<br>(RP-HPLC)      | 97  |
| 3.2.5  | Fast Protein Liquid Chromatography (FPLC)                              | 97  |
| 3.2.6  | Circular Dicroism (CD) Spectrophotometer                               | 98  |
| 3.2.7  | Differential Scanning Calorimetry (DSC)                                | 98  |
| 3.2.8  | Thermo Gravimetric Analysis (TGA)                                      | 98  |
| 3.2.9  | Particle Size Analyzer   | 99  |
| 3.2.10 | Contact angle measurements   | 99  |
| 3.2.11 | Mechanical Tensile test  | 99  |
| 3.2.12 | Scanning Electron Microscopy (SEM)                                     | 100 |
| 3.2.13 | Optical Microscopy   | 100 |
| 3.2.14 | Ultra-thin nanofibers microporous membranes made by<br>Electrospinning | 100 |
| 3.2.15 | Synthesis of Micro-particles by reverse phase Emulsion                 |     |

|        |  |     |
|--------|--|-----|
|        | technique  | 100 |
| 4.     | SYNTHESIS AND CHARACTERIZATION OF POLYMER<br>PROTEIN CONJUGATES USING TRYPSIN AS MODEL |     |
|        | PROTEIN  | 102 |
| 4.1.   | Introduction   | 102 |
| 4.2.   | Methodology  | 109 |
| 4.2.1. | Synthesis and Characterization of Polyacetals (PA)                                     | 109 |
| 4.2.2. | Synthesis and characterization of Polyacetal-Trypsin<br>conjugates                     | 113 |
| 4.2.3. | Study of PUMPT effect with PA-T conjugates   | 116 |
| 4.2.4. | PEGylated systems  | 119 |
| 4.3.   | Results  | 127 |
| 4.3.1. | Synthesis and Characterization of Polymer conjugates                                   | 127 |
| 4.3.2. | Synthesis and characterization of PA-T conjugates                                      | 132 |
| 4.3.3. | Study of PUMPT effect with PA-T conjugates   | 142 |
| 4.3.4. | Synthesis and characterization of PEG-Trypsin<br>conjugates                            | 150 |
| 4.4.   | Discussion   | 155 |
| 4.5.   | Conclusions  | 159 |
| 5.     | SYNTHESIS AND CHARACTERIZATION OF CURCUMIN<br>POLY(ACETALS)                            | 161 |
| 5.1.   | Introduction   | 161 |

|        |  |     |
|--------|--|-----|
| 5.1.1. | Polyacetals as carriers  | 162 |
| 5.1.2. | Chronic wounds and Curcumin as model drug  | 163 |
| 5.2.   | Methodology  | 165 |
| 5.2.1. | Synthesis and Characterization   | 165 |
| 5.2.2. | Hydrolysis of PACur and Curcumin Release kinetics                                | 168 |
| 5.2.3. | Cytotoxicity of Cur and PACur  | 169 |
| 5.3.   | Results  | 171 |
| 5.3.1. | Synthesis and Characterization   | 171 |
| 5.3.2. | Hydrolysis of PACur and Release kinetics   | 175 |
| 5.3.3. | Cytotoxicity of Cur and PACur  | 176 |
| 5.4.   | Discussion   | 178 |
| 5.4.1. | Synthesis and Characterization   | 178 |
| 5.4.2. | Hydrolysis of PACur and Release kinetics   | 182 |
| 5.4.3. | Cytotoxicity of Cur and PACur  | 186 |
| 5.5.   | Conclusions  | 188 |
| 6.     | SYNTHESIS AND CHARACTERIZATION OF HYALURONIC<br>ACID MICROPARTICLES              | 190 |
| 6.1.   | Introduction   | 190 |
| 6.2.   | Methodology  | 193 |
| 6.2.1. | Synthesis of MPs and encapsulation of model<br>drugs and Polymer-drug conjugates | 193 |
| 6.2.2. | Characterization of loaded and un-loaded MPs                                     |     |

|  |     |
|--|-----|
| systems  | 198 |
| 6.2.2.1. Morphology by SEM   | 198 |
| 6.2.2.2. Particle Size Distribution  | 198 |
| 6.2.2.3. Encapsulation Efficiency an Total Drug Loading  | 198 |
| 6.2.3. Drug Release Kinetic studies from loaded HA-MPs   | 200 |
| 6.3. Results   | 201 |
| 6.3.1. Synthesis of MPs and encapsulation of model<br>drugs and Polymer-drug conjugates  | 201 |
| 6.3.2. Characterization of loaded and un-loaded MPs systems  | 201 |
| 6.4. Discussion  | 223 |
| 6.5. Conclusions   | 225 |
| 7. POLYMERIC COMPOSITE SYSTEM DESIGNED TO PROMOTE A<br>LONG LASTING, STABLE, LOCALIZED AND CONTROLLED DRUG<br>RELEASE              | 227 |
| 7.1. Introduction  | 227 |
| 7.2. Methodology   | 230 |
| 7.2.1. Synthesis of Poly(L-lactic) acid membranes by<br>electrospinning and encapsulation of model drugs and<br>polymer conjugates | 230 |
| 7.2.2. Synthesis of polymeric composite systems: thin membranes<br>loaded with microparticles                                      | 234 |
| 7.2.3. Characterization of Poly(L-lactic) acid membranes   |     |

|   |     |
|---|-----|
| and composite systems   | 238 |
| 7.2.4. Preliminary Biologic Evaluation though in vitro assays                                 | 241 |
| 7.3. Results  | 244 |
| 7.3.1. Synthesis and characterization Poly (L-lactic) acid<br>membranes and composite systems | 244 |
| 7.3.2. Preliminary Biologic Evaluation though in vitro assays                                 | 292 |
| 7.4. Discussion   | 302 |
| 7.4.1. Synthesis and characterization Poly (L-lactic) acid<br>membranes and composite systems | 302 |
| 7.4.2. In vitro studies   | 309 |
| 7.5. Conclusions  | 311 |
| 8. GENERAL DISCUSSION   | 315 |
| 9. FINAL CONCLUSIONS  | 324 |
