**CONSIDERACIONES PREVIAS** 7

**RESUMEN** 9
**ABSTRACT** 10
**RESUM** 11

**1. INTRODUCCIÓN**
1.1 La actualidad en la industria de producción de alimentos 13
1.2 Nuevas tendencias: Análisis rápidos no destructivos 15
1.3 La automatización en la industria de cereales 19
1.4 Visión tridimensional basada en luz estructurada 22
1.5 Fundamentos de espectroscopía 27
1.6 El sistema de imagen espectral 30
1.7 Tipos de imagen espectral 32
1.8 Sistemas de adquisición de imagen espectral 34
1.9 Modos de adquisición de imagen espectral 35
1.10 Bibliografía 37

**OBJETIVOS** 43

**CAPÍTULO I: Continuous monitoring of bread dough fermentation using a 3D vision Structured Light technique**

Abstract 45
1. Introduction 46
2. Material and Methods 48
2.1 Dough preparation and the fermentation process 48
2.2 Fermentation monitoring by ¨Structured Light¨ 50
2.3 SL method information extraction 52
3. Results and discusion 53
4. Conclusions 62
5. Acknowledgements 63
6. Bibliography 63

**CAPÍTULO II: Relationship between fermentation behavior, measured with a 3D vision Structured Light technique, and the internal structure of bread**

Abstract 68
1. Introduction 69
2. Material and Methods 71
2.1 Physicochemical characterization of flours 71
2.2 Dough preparation and fermentation process 72
2.3 Fermentation monitoring by ¨Structured Light¨ 74
2.4 SL method image processing 76

2.5 Sampling procedure to 2D image acquisition 77
2.6 2D image acquisition and segmentation 78
3. Results and discusion 80
3.1 SL method results 80
3.2 2D image segmentation results 81
3.3 Joined analysis of SL and 2D image segmentation 83
4. Conclusions 89
5. Acknowledgements 90
6. Bibliography 90

**CAPÍTULO III: Study of high strength wheat flours considering their physicochemical and rheological characterisation as well as fermentation capacity using SW-NIR imaging**

Abstract 96
1. Introduction 97
2. Material and Methods 100
2.1 Assay development 100
2.2 Dough preparation and fermentation process 101
2.3 Characterisation of batches 102
2.3.1 Physicochemical analysis 102
2.3.2 SW-NIR data acquisition & processing 103
2.3.3 Monitoring fermentation with the ¨Structured Light¨ method (SL) and image processing 104
2.3.4 Fitting of the dataset to the Gompertz prediction model 106
2.4 Statistical analysis 107
3. Results and discusion 107
3.1 Characterisation of batches 107
3.1.1 Physicochemical analysis and fermentation kinetics 107
3.1.2 SW-NIR imaging analysis 112
4. Conclusions 119
5. Bibliography 120

**CAPÍTULO IV: Detection of adulterations with different grains in wheat products based on the hyperspectral image technique: the specific cases of flour and bread**

Abstract 125
1. Introduction 126
2. Material and Methods 128
2.1 Flour types and raw materials 128
2.2 Bread-making process 130
2.3 Crumb conditioning 131
2.4 SW-NIR data acquisition and processing 131
2.5 Physico-chemical parameters 132
2.5.1 Pasting properties of flours 132
2.5.2 Baking loss, water activity and texture profile analysis of breads 133
2.6 Statistical analysis 134
3. Results and discusion 136

3.1 MSPC results 136
3.2 Repercussions of adulteration on flour and bread properties, and its relationship with hyperspectral detection 141
4. Conclusions 150
5. Bibliography 150

**CAPÍTULO V: Control of heat treatment process of wheat flour by SW-NIR image analysis**

Abstract 156
1. Introduction 157
2. Material and Methods 160
2.1 Heat treatment of wheat flour 160
2.2 SW-NIR data acquisition and processing 161
2.3 Cake processing 162
2.4 Characterization of cakes 164
2.5 Statistical analysis 166
3. Results and discusion 167
3.1 SW-NIR data acquisition and processing 167
3.2 Reducing number of wavelengths 175
3.3 Relationship between information from the SW-NIR analysis and sponge cake properties 178
4. Conclusions 182
5. Bibliography 183

**CAPÍTULO VI: Hyperspectral image control of the heat-treatment process of oat flour to model composite bread properties**

Abstract 190
1. Introduction 191
2. Material and Methods 193
2.1 Experiment procedure 193
2.2 Raw materials 195
2.3 Heat treatment of oat flour 196
2.4 Hyperspectral image data acquisition and processing 197
2.5 Bread-making process 198
2.6 Characterization of bread properties 199
2.7 Statistical methods 200
3. Results and discusion 202
3.1 Hyperspectral image data acquisition 202
3.2 Characterization of bread properties 203
3.3 Studying the relationship of hyperspectral data and bread properties data 208
4. Conclusions 213
5. Bibliography 214

**CAPÍTULO VII: Physicochemical effects of chia (Salvia Hispanica) seed flour on each wheat bread-making process phase and product storage**

Abstract 219
1. Introduction 220
2. Material and Methods 223
2.1 Raw materials and dough preparation 223
2.2 Characterization of flour mixing dough by a viscometer Rapid Viscosity Analyser (RVA) 225
2.1 Fermentation process and its continuous monitoring 226
2.4 Study of internal dough structure in the fermentation phase 227
2.5 Study of the end product 228
2.6 Statistical analysis 229
3. Results and discusion 230
3.1 Characterization of flour mixtures by Rapid Viscosity Analysis 230
3.2 Fermentation process 232
3.3 End product 236
3.3.1 Baking process phase 236
3.3.2 Texture, mass loss and water activity of bread 239
4. Conclusions 244
5. Acknowledgements 245
6. Bibliography 245

**CONCLUSIONES GENERALES** 251

**PUBLICACIONES REALIZADAS DURANTE EL PERIODO DE REALIZACIÓN DE LA TESIS DOCTORAL** 253
