

Índice general

| | |
|--|-----------|
| Índice General | XIV |
| Objetivos, Estructura y Contribuciones | 1 |
| Publicaciones | 7 |
| I Estado del Arte | 9 |
| 1 Control Predictivo Basado en Modelo | 11 |
| 1.1 Teoría de Sistemas | 11 |
| 1.1.1 Sistemas en Tiempo Discreto | 11 |
| 1.1.2 Estabilidad | 12 |
| 1.2 Teoría de Conjuntos Invariantes | 14 |
| 1.3 Polítopos | 17 |
| 1.4 Problema de Optimización Estándar | 21 |
| 1.5 Controladores Predictivos | 22 |
| 1.5.1 Breve Historia sobre MPC | 23 |
| 1.5.2 Idea Básica del MPC | 23 |
| 1.5.3 Estabilidad y Factibilidad en MPC | 25 |
| 1.5.4 MPC para Sistemas LTI | 27 |
| 1.5.5 Control Predictivo Robusto para Sistemas LTI Inciertos | 28 |
| 1.6 Diferentes Formulaciones de los MPC | 35 |
| 2 Sistemas Lineales con Saltos Markovianos | 41 |
| 2.1 Introducción | 41 |
| 2.2 Cadena de Markov | 42 |
| 2.3 Control Óptimo para MJLS sin Restricciones | 44 |
| 2.4 Estabilidad de MJLS | 46 |
| 2.5 Control Óptimo para MJLS con Incertidumbres sujeto a Restricciones | 48 |
| 2.5.1 Formulación del problema | 48 |
| 2.5.2 Discusión | 52 |

| | | |
|-----------|---|-----------|
| 2.6 | Conclusiones | 53 |
| 3 | Control Predictivo para Sistemas Lineales con Saltos Markovianos | 55 |
| 3.1 | Introducción | 56 |
| 3.2 | Preliminares y Notación | 56 |
| 3.2.1 | Notación | 57 |
| 3.2.2 | Control Óptimo sin Restricciones para MJLS | 59 |
| 3.2.3 | Descripción del Problema | 60 |
| 3.3 | Desarrollo del Control Predictivo para MJLS | 61 |
| 3.3.1 | Modelo de Predicción | 61 |
| 3.3.2 | Conjuntos Terminal y Factible | 63 |
| 3.3.3 | Cálculo de la acción de control | 65 |
| 3.3.4 | Cuestiones Computacionales | 66 |
| 3.4 | Ejemplo Ilustrativo | 68 |
| 3.4.1 | Resultados para diferentes simulaciones | 71 |
| 3.5 | Control Predictivo Basados en Escenarios | 76 |
| 3.5.1 | Diseño MPC Estocástico | 77 |
| 3.6 | Conclusiones | 83 |
| II | Contributions | 84 |
| 4 | Multiple-horizon Predictive Control for Markov/switched Linear Systems | 85 |
| 4.1 | Introduction | 86 |
| 4.2 | Preliminaries and Problem statement | 86 |
| 4.2.1 | Predictive Control for Markov/switched Systems. | 87 |
| 4.2.2 | Problem Statement | 88 |
| 4.3 | Sequence-set Predictive Control | 89 |
| 4.3.1 | Prediction Model | 89 |
| 4.3.2 | Sequence-set-Dependent Cost Index for Predictive Control | 90 |
| 4.4 | Terminal and Feasible Sets | 92 |
| 4.4.1 | Mode-dependent Terminal Set. | 92 |
| 4.4.2 | Mode-dependent Feasible Sets. | 92 |
| 4.5 | Multiple-horizon Predictive Control | 93 |
| 4.5.1 | Receding Horizon Implementation (minimax case) | 95 |
| 4.5.2 | Choice of Sequence Sets | 97 |
| 4.6 | Numerical example | 98 |
| 4.7 | Conclusions of this Chapter | 100 |

| | | |
|----------|--|------------|
| 5 | Ingredients for Stable Receding-horizon Scenario-based Predictive Control | 101 |
| 5.1 | Introduction | 102 |
| 5.2 | Preliminaries and Problem Statement | 103 |
| 5.2.1 | Information Model | 104 |
| 5.2.2 | Infinite Horizon and Mean-square Stability. | 105 |
| 5.2.3 | Problem Statement | 107 |
| 5.3 | Terminal Ingredients of the Scenario-based Approach | 107 |
| 5.3.1 | Quadratic Case | 108 |
| 5.4 | Predictive Control on Scenarios/trees | 110 |
| 5.4.1 | Cost Index Associated to a non-empty Tree | 114 |
| 5.4.2 | Constraints and Predictive Control Problem Set-up | 115 |
| 5.5 | Feasibility Analysis | 116 |
| 5.5.1 | Recursive Feasibility in Receding-horizon Implementation | 120 |
| 5.6 | Stability | 121 |
| 5.6.1 | Scenario Generation | 123 |
| 5.7 | Conclusions of this Chapter | 124 |
| 6 | Reliable MPC for Markov-jump Linear Systems | 127 |
| 6.1 | Introduction | 128 |
| 6.2 | Preliminaries | 128 |
| 6.2.1 | Problem Statement | 129 |
| 6.3 | Reliability analysis of a stochastically stable Markov-jump system | 130 |
| 6.3.1 | Choice of high-likelihood terminal and feasible sets for MPC technique | 131 |
| 6.4 | Numerical Example | 135 |
| 6.5 | Conclusions of this Chapter | 139 |
| 7 | Reliable Controllable Sets for Constrained Markov-Jump Linear Systems | 141 |
| 7.1 | Introduction | 142 |
| 7.2 | Preliminaries, Problem Statement | 143 |
| 7.2.1 | Robust h -step Sets | 143 |
| 7.2.2 | Problem Statement and Auxiliary Notation | 144 |
| 7.3 | Augmented and Sequence-dependent Sets | 146 |
| 7.3.1 | Augmented h -step Sets | 146 |
| 7.3.2 | Sequence-dependent h -step Sets | 148 |
| 7.4 | Reliable On-line Controller Design | 151 |

| | | |
|----------|--|------------|
| 7.4.1 | Controller with known Current Mode in On-line Operation | 151 |
| 7.4.2 | Controller With no On-line Mode Information | 155 |
| 7.4.3 | Discussion and Computational Issues | 156 |
| 7.5 | Numerical Example | 157 |
| 7.6 | Conclusions of this Chapter | 161 |
| 8 | Reliability and Time-to-Failure Bounds for Constrained MJLS | 163 |
| 8.1 | Introduction | 164 |
| 8.2 | Preliminaries | 165 |
| 8.2.1 | Problem statement | 167 |
| 8.3 | Reliability Bound Computation | 168 |
| 8.3.1 | Iterative $RL_l(\cdot, \cdot)$ Algorithm | 170 |
| 8.3.2 | Terminal Set Based Algorithm | 175 |
| 8.4 | Mean time to failure bound computation | 178 |
| 8.5 | Terminal-set algorithm and implementation guidelines | 179 |
| 8.6 | Examples | 184 |
| 8.7 | Conclusion | 187 |
| | Conclusiones y Trabajo Futuro | 188 |
| | Bibliografía | 192 |
| | Apéndices | 204 |
| | A Optimización con Restricciones | 205 |
| | B Ejemplos | 209 |
| B.1 | Ejemplo: MPC para Sistemas LTI | 209 |
| B.2 | Ejemplo: MPC Robusto para Sistemas LTIs Inciertos | 212 |
| B.3 | Ejemplo: MPC Robusto para MJLS Inciertos | 218 |
