1	Introduction	1
1.1	Background	1
1.2	Previous works	4
1.3	Objectives	6
1.4	Methodology	7
	Bibliography	10
2	Methodologies to improve engine efficiency	13
2.1	Introduction	14
2.2	Combustion and emissions trade-off	15
2.2.1	Air management	15
2.2.2	In-cylinder processes	17
2.2.3	Other strategies	19
2.3	Consumption optimization methodologies	21
2.3.1	Indicated cycle optimization	22
2.3.1.1	Alternative combustion modes	23
2.3.2	Air management	24
2.3.3	Heat transfer reduction	26
2.3.3.1	Engine thermal management	27
2.3.3.2	Low heat rejection engines	30
2.3.4	Friction and auxiliary losses reduction	32

2.3.4.1	Friction losses reduction	32
2.3.4.2	Auxiliary systems improvement	34
2.3.5	Other strategies	35
2.3.5.1	Downsizing	35
2.3.5.2	Hybrid powertrains	36
2.4	Thermal balance in reciprocating internal combustion engines .	37
2.4.1	Thermal balance in conventional engines	38
2.4.2	Thermal balance application on alternative combustion modes, fuels and fuel blends	43
2.4.3	Thermal balance on low heat rejection engines and engine thermal management	46
2.4.4	Exhaust energy recovery	47
2.4.5	Summary	48
2.5	Conclusions	50
	Bibliography	54
3	Experimental and theoretical tools	77
3.1	Introduction	78
3.2	Experimental installations	79
3.2.1	Multi-cylinder engine	80
3.2.1.1	Gas lines instrumentation	81
3.2.1.2	Liquid lines instrumentation	83
3.2.2	Single-cylinder engine	84
3.2.2.1	Engine architecture and hardware	84
3.2.2.2	Single-cylinder engine test bench	86
3.3	Thermodynamic model	89
3.3.1	Basic hypotheses	89
3.3.2	Filling and emptying model	91
3.3.3	Combustion chamber mass balance	94
3.3.4	Combustion chamber energy balance during closed cycle	96

3.3.5	Sub-models description	101
3.3.6	Heat transfer models	102
3.3.6.1	Reference in-cylinder heat transfer model . . .	103
3.3.6.2	Lumped conductance model	105
3.3.7	Injection rate model	108
3.3.8	Reference blow-by model	111
3.3.9	Mechanical deformations model	112
	Bibliography	115
4	Methodology to analyse the Global Energy Balance (GEB)	119
4.1	Introduction	120
4.2	Global energy balance system definition	122
4.2.1	External global energy balance	124
4.2.2	Internal global energy balance	130
4.3	Equivalence between heat rejection terms in the internal and external analysis	136
4.3.1	Total heat transfer	136
4.3.2	Heat transfer to coolant	138
4.3.3	Heat transfer to oil	140
4.4	Experimental uncertainty analysis	141
4.4.1	Indicated and pumping power	143
4.4.2	Brake power	145
4.4.3	Auxiliary and friction power	145
4.4.4	Heat transfer to coolant	147
4.4.5	Heat transfer to oil	147
4.4.6	Net sensible enthalpy	148
4.4.7	Heat transfer from air	150
4.4.8	Heat transfer from EGR	151
4.5	Conclusions	153

4.A Appendix: Development of the energy balance equation	155
4.B Sensible enthalpy flows	164
Bibliography	167
5 Sub-models development and improvement	169
5.1 Introduction	171
5.2 Heat transfer model improvement	172
5.2.1 Heat transfer model for engines with tumble motion . .	172
5.2.1.1 Tumble formation, evolution and dissipation .	173
5.2.1.2 CFD analysis	175
5.2.1.3 Model adaptation	180
5.2.1.4 Model calibration	182
5.2.1.5 Sensitivity analysis	185
5.2.1.6 Combustion analysis	189
5.2.2 Heat transfer to the ports	191
5.2.2.1 Heat transfer to the intake ports	194
5.2.2.2 Heat transfer to the exhaust ports during closed cycle	195
5.2.2.3 Heat transfer to the exhaust ports during open cycle	196
5.2.3 Heat transfer from oil to coolant	199
5.3 Uncertainties adjustment	203
5.3.1 Engine characterization	205
5.3.1.1 Sensitivity study	207
5.3.1.2 Uncertainties determination based on multiple linear regression	210
5.3.2 Evaluation of the methodology performance	213
5.3.2.1 Motoring conditions	213
5.3.2.2 Evaluation of combustion results	217
5.4 Mechanical losses model	218

5.4.1	Lubrication fundamentals	219
5.4.2	Friction losses between piston pack and liner	221
5.4.2.1	Piston pack load determination	222
5.4.2.2	Friction between piston pack and liner	224
5.4.3	Bearings friction	226
5.4.4	Valve train friction	229
5.4.5	Coolant pump power	234
5.4.6	Oil pump power	235
5.4.7	Fuel pump power	237
5.5	Summary	241
5.A	Appendix: adjustment methodology performance with late SoI tests	243
5.B	Appendix: blow-by model	246
5.C	Appendix: piston rings mounting force determination	252
5.D	Appendix: kinematic and dynamic analysis of the engine mechanism	254
5.D.1	Engine kinematics	254
5.D.2	Engine dynamics	256
5.E	Appendix: kinematic and dynamic analysis of the valve train .	259
5.E.1	Cam/follower kinematics	259
5.E.2	Cam/follower dynamics	264
5.F	Appendix: rolling follower friction force determination	267
	Bibliography	269
6	Application of the GEB in direct injection engines	275
6.1	Introduction	276
6.2	GEB in Engine A	277
6.2.1	Sub-models calibration	278
6.2.1.1	Heat transfer to chamber walls calibration . .	280
6.2.1.2	Heat transfer to ports calibration	283

6.2.1.3	Mechanical losses	284
6.2.1.4	Heat transfer from oil to coolant	287
6.2.1.5	Calibration evaluation	288
6.2.2	GEB analysis of the engine map	291
6.2.2.1	Analysis of engine efficiency	291
6.2.2.2	Mechanical losses analysis	293
6.2.2.3	Heat transfer analysis	298
6.2.2.4	Exhaust energy losses	301
6.2.2.5	Miscellaneous losses	304
6.3	GEB in Engine B	306
6.3.1	Sub-models calibration	307
6.3.2	Parametric studies	310
6.3.2.1	Post injection timing variation	311
6.3.2.2	Main injection timing variation	316
6.3.2.3	Variation of the intake-exhaust pressure drop .	319
6.3.2.4	Predictive study on heat transfer reduction .	324
6.4	Summary and conclusions	328
	Bibliography	331
7	Conclusions and future works	333
7.1	Conclusions	333
7.1.1	Conclusions regarding the analysis of the relationship between emissions and efficiency and the assessment of its impact on the thermal balance	334
7.1.2	Conclusions regarding the comprehensive thermal balance methodology that allows determining and analysing all the energy terms	335
7.1.3	Conclusions regarding the development of the necessary sub-models to complete a comprehensive thermal balance	336
7.1.4	Conclusions regarding the methodology for the calibration of the sub-models	337

7.1.5 Conclusions regarding the potential of the calibrated sub-models and the energy balance methodology through their application on different engines	337
7.2 Future works	339
Bibliography	341
Bibliographic Index	343
