

Perchillos del Tejado - fimo - Peguen

Longitud de una Jalla =  $31 \times 40 = 1240 \text{ m.}$

Diferencia entre perchillos =  $400 \text{ m.}$

K<sub>q</sub> total por m. l. de faldón =  $100 \times 4 = 400 \text{ Kg.}$

Longitud de faldón de la pisa =  $\frac{1240}{4} = 310 \text{ m.}$

K<sub>q</sub> sobre B<sub>1</sub> o<sub>2</sub> =  $310 \times 400 = 1240 \text{ Kg.}$   $\frac{1}{2}$

Para carga total doble (200 Kg/m<sup>2</sup>) toda doble.

Pisa comprimida y flexada - longitud 310 m. -

1-3-10-13 =  $26000 \text{ Kg.}$   $M = \frac{pl^2}{10} = \frac{800 \times 310^2}{10} = 7688 \text{ cm}^4 \neq 77200 \text{ cm}^4$

$\delta = \frac{Mv}{I} + \frac{N}{A} = \frac{26000 \times v}{I} + \frac{26000}{A} = \frac{77200}{0.1676 \text{ m}^2} + \frac{26000}{6 \text{ m}^2} =$

Para  $15 \times 30 \text{ #}$   $\frac{77200}{0.162 \times 15 \times 30^2} + \frac{26000}{15 \times 30} = \frac{2200}{2254} + \frac{26000}{450} = 341 + 57.77 = 6118 \%$

Pisas comprimidas

4 =  $2400 \text{ Kg.}$  de  $0.80 \text{ m.}$   $I = 2.5 \times 24 \times 0.8^2 = 3.84 \text{ cm}^4$  L  $50 \times 50 \times 5 - 4.59 \text{ cm}^4$

7 =  $4400 \text{ Kg.}$  de  $1.80 \text{ m.}$   $I = 2.5 \times 44 \times 1.8^2 = 35.64 \text{ cm}^4$  JL  $60 \times 60 \times 6 - 4.59 \text{ cm}^4$

12 =  $2200 \text{ Kg.}$  de  $0.80 \text{ m.}$   $I = 2.5 \times 22 \times 0.8^2 = 3.52 \text{ cm}^4$  L  $50 \times 50 \times 5 - 4.59 \text{ cm}^4$

Pierros entrecruzados

2-6 =  $23200 \text{ Kg.}$  JL  $90 \times 90 \times 9$   $2 \times 15.5 = 31.00 \text{ m}^2$

9 =  $10800 \text{ Kg.}$  JL  $65 \times 65 \times 7$   $17.40 \text{ m}^2$

8-14 =  $8800 \text{ Kg.}$  JL  $65 \times 65 \times 7$   $2 \times 8.70 = 17.40 \text{ m}^2$

5-11 =  $3800 \text{ Kg.}$  JL  $50 \times 50 \times 5$   $2 \times 4.80 = 9.60 \text{ m}^2$
