ABSTRACT	1
RESUMEN.....	3
RESUM	5
TABLE OF CONTENTS.....	9
LIST OF FIGURES.....	15
LIST OF TABLES.....	23
LIST OF ABBREVIATIONS AND NOTATION	27
CHAPTER 1: INTRODUCTION	35
1.1. MOTIVATION.....	35
1.2. OBJECTIVES.....	38
1.3. DOCUMENT STRUCTURE	38
CHAPTER 2: STATE OF THE ART: REVIEW AND ANALYSIS.....	41
2.1. THE PATH TO UHPFRC	41
2.1.1. <i>Brief review of the birth of reinforced concrete</i>	41
2.1.1.1 Evolution of reinforced concrete in codes and construction technology	43
2.1.1.2 Evolution of concrete matrix performance.....	44
2.1.1.3 Special concretes	45
2.1.2. <i>Ultra-High Performance Fibre-Reinforced Concrete (UHPFRC)</i>	47

2.2.	UHPFRC LIMITATIONS AND FUTURE PERSPECTIVES	49
2.2.1.	Raw material costs of UHPFRC.....	49
2.2.2.	Design recommendations for UHPFRC.....	50
2.3.	TENSILE BEHAVIOUR EVOLUTION.....	51
2.3.1.	Tensile behaviour of conventional concrete.....	51
2.3.1.1	Considering the tensile behaviour of conventional concrete in codes	57
2.3.2.	Tensile behaviour of fibre-reinforced concrete	58
2.3.2.1	Stress-crack opening relationship (RILEM TC 162-TDF)	60
2.3.2.2	Stress-strain relationship (RILEM TC 162-TDF).....	64
2.3.2.3	MC2010 proposal for fibre-reinforced concrete.....	67
2.3.2.4	Summary.....	70
2.3.3.	UHPFRC tensile behaviour.....	71
2.4.	UHPFRC CLASSIFICATION.....	77
2.4.1.	Classification proposed by Naaman et al.....	78
2.4.2.	Classification proposed by Wille et al.....	80
2.4.3.	Classification proposed by the French standard	81
2.4.4.	Classification proposed by the Swiss standard.....	82
2.4.5.	Summary.....	82
2.5.	SELECTING THE SUITABLE TEST SETUP.....	84
2.5.1.	Uniaxial tensile test.....	85
2.5.2.	Bending tests.....	86
2.5.2.1	Notched three-point bending test	87
2.5.2.2	Unnotched four-point bending test.....	89
2.5.3.	Standard tests in UHPFRC recommendations	92
2.5.3.1	Standard tests in the French standard.....	92
2.5.3.2	Standard tests in the Swiss standard	94
2.5.4.	Advisability of a single test	95
2.5.5.	Summary.....	96
2.6.	THE FOUR-POINT BENDING TEST: INVERSE ANALYSIS METHODS	97
2.6.1.	Method based on the complete experimental law	99
2.6.1.1	Load-deflection method	99
2.6.1.2	Load-strain method	99
2.6.1.3	Load-curvature method	100
2.6.1.4	Point-by-point method	101
2.6.2.	Methods based on key points: simplified methods	103
2.6.2.1	Simplified method by Kanakubo	104
2.6.2.2	Simplified method in the French standard	106
2.6.2.3	Simplified method in the Swiss standard.....	109
2.6.3.	Summary.....	111
2.7.	ANALYTICAL FRACTURE MODELS IN BENDING: THE NON-LINEAR HINGE MODEL.....	112
2.7.1.	Discontinuous models: Fictitious Crack Model.....	113
2.7.2.	Continuous models: the Crack Band Model	114
2.7.3.	The non-linear hinge model	115
2.7.3.1	Pedersen	117

2.7.3.2	Casanova & Rossi	118
2.7.3.3	Stang & Olesen.....	119
2.7.3.4	Ostergaard et al.	120
2.7.3.5	Non-linear hinge length	121
2.7.3.6	Summary	121
CHAPTER 3: CLOSED-FORM NON-LINEAR HINGE MODEL.....		123
3.1.	INTRODUCTION	123
3.2.	RESEARCH SIGNIFICANCE.....	126
3.3.	CLOSED-FORM NON-LINEAR HINGE MODEL	126
3.3.1.	<i>Constitutive hypothesis</i>	126
3.3.2.	<i>Definition of the non-linear hinge</i>	127
3.3.3.	<i>Crack-opening – strain relationship</i>	130
3.3.4.	<i>Closed-form formulation</i>	131
3.3.4.1	<i>M – ϕ – ϵt relationships</i>	132
3.3.4.2	<i>Bending moment - crack opening relationship</i>	137
3.3.4.3	<i>Bending moment vs. crack depth</i>	141
3.3.5.	<i>Average curvature to displacement at mid-span in a FPBT</i>	142
3.3.5.1	<i>Analytical validation</i>	146
3.3.5.2	<i>Experimental validation</i>	150
3.3.5.3	<i>Implications for hinge length</i>	154
3.4.	CHECKS AND SUPPLEMENTS TO THE NON-LINEAR HINGE MODEL.....	156
3.4.1.	<i>Suitability of the non-linear hinge hypothesis</i>	156
3.4.2.	<i>Modification of crack hinge length</i>	160
3.4.2.1	<i>Implications of the hinge length modification</i>	163
3.4.3.	<i>The crack’s position</i>	166
3.4.4.	<i>Influence of the linear elastic hypothesis in compression</i>	168
3.4.5.	<i>Scale effect</i>	170
3.4.5.1	<i>Bazant size effect law</i>	176
3.5.	SUMMARY	180
CHAPTER 4: ITERATIVE INVERSE ANALYSIS METHODS.....		183
4.1.	INTRODUCTION	183
4.1.	LOAD–CURVATURE INVERSE ANALYSIS METHODS	184
4.1.1.	<i>Iterative load-curvature inverse analysis method (I-IA)</i>	184
4.1.2.	<i>Point-by-point load-curvature inverse analysis method (PBP-IA)</i>	185
4.1.3.	<i>Example of an application</i>	186
4.2.	EXPERIMENTAL VALIDATION.....	191
4.2.1.	<i>Experimental programme</i>	191
4.2.2.	<i>Load–deflection results</i>	193
4.2.3.	<i>Application of the inverse analysis</i>	194
4.2.4.	<i>The displacement to curvature check</i>	196
4.2.5.	<i>Analysis of the average strain profile inside the hinge</i>	198
4.2.6.	<i>Constitutive tensile behaviour</i>	200

4.3.	SUMMARY	202
CHAPTER 5: SIMPLIFIED FIVE-POINT INVERSE ANALYSIS METHOD		203
5.1.	INTRODUCTION	203
5.2.	SIMPLIFIED FIVE-POINT INVERSE ANALYSIS METHOD (5P-IA)	204
5.2.1.	<i>General assumptions</i>	204
5.2.2.	<i>Simplified Five-Point Inverse Analysis methodology derivation (5P-IA)</i>	206
5.2.2.1	Determination of stage 1. Linear elastic state.	208
5.2.2.2	Determining stage 2. Hardening state.	211
5.2.2.3	Determination of softening stages.	215
5.2.2.4	Determination of the unloading modulus.....	218
5.2.3.	<i>Crack position correction in the simplified 5P-IA</i>	219
5.2.4.	<i>Adaptation of the hinge length assumption to the simplified 5P-IA</i>	220
5.2.5.	<i>Simplified 5P-IA summary</i>	222
5.2.6.	<i>Example of applying 5P-IA</i>	225
5.3.	VALIDATION OF 5P-IA.....	229
5.3.1.	<i>Analytical validation</i>	229
5.3.2.	<i>Experimental validation</i>	231
5.3.2.1	Crack position correction	232
5.3.2.2	Crack hinge length	236
5.3.2.3	Comparing 5P-IA and PBP-IA.....	237
5.4.	SUMMARY	244
CHAPTER 6: UHPFRC CLASSIFICATION AND CHARACTERISATION TEST PROPOSAL		249
6.1.	INTRODUCTION	249
6.2.	UHPFRC CLASSIFICATION	250
6.2.1.	<i>The classification of French and Swiss standards</i>	251
6.2.2.	<i>Proposed UHPFRC constitutive models</i>	253
6.2.3.	<i>The proposed UHPFRC classification</i>	256
6.3.	PROPOSED STANDARD TEST SETUP AND METHODOLOGY	262
6.3.1.	<i>Specimen preparation and test setup</i>	263
6.3.2.	<i>Analysis of the results</i>	266
6.3.3.	<i>Example of the application</i>	269
6.4.	SUMMARY	273
CHAPTER 7: CONCLUSIONS AND FUTURE WORK		275
7.1.	CONCLUSIONS	275
7.2.	FUTURE WORKS	281
BIBLIOGRAPHY		283
APPENDIX I: EXPERIMENTAL PROGRAM I		295
AP.I.1	EXPERIMENTAL PROGRAM	295
AP.I.2	SUMMARY OF RESULTS.....	298

<i>AP.1.2.1. Deviation from experimental results</i>	<i>314</i>
<i>AP.1.2.2. Constitutive relationships obtained from PBP-IA</i>	<i>315</i>
<i>AP.1.2.3. Constitutive relationships obtained from I-IA.....</i>	<i>317</i>
APPENDIX II: EXPERIMENTAL PROGRAM II.....	319
AP.II.1EXPERIMENTAL PROGRAM	319
AP.II.2 SUMMARY OF RESULTS.....	320
<i>AP.II.2.1. Average constitutive curves.....</i>	<i>337</i>
<i>AP.II.2.2. Stress-strain constitutive results summarise</i>	<i>338</i>
<i>AP.II.2.3. Stress-crack opening constitutive results summarise.....</i>	<i>339</i>
