Abstract	III
<i>Resumen</i>	VII
<i>Resum</i>	XI
<i>Contents</i>	XV
<i>Figures index</i>	XVII
<i>Table index</i>	XVII
<i>Abbreviations</i>	XVIII
1. Chapter 1. Introduction	1
1.1. <i>Scope and motivation</i>	1
1.2. <i>Thesis structure</i>	3
2. Chapter 2. Objectives	7
3. Chapter 3. Material and Methods	9
4. Chapter 4. Results and Discussion	13
4.1 <i>Contextualization stage</i>	15
4.2 <i>Procedural stage</i>	16
4.2.1 Analytical stage	16
4.2.1.1 Quantification of potential energy recovery in irrigation water networks	16
4.2.1.2 Maximization strategy as a water management tool in water distribution systems	30
4.2.2 Experimental stage	34
4.2.2.1 Steady Flow analysis: best efficiency line (<i>BEL</i>)	34
4.2.2.2 Unsteady flow analysis: Overspeed effects	36
5. Chapter 5. Conclusions and Future Developments	37
5.1 <i>Conclusions and mine findings</i>	39
5.2 <i>Future developments</i>	45
6. Chapter 6. References	47
Appendices	49
<i>Appendix I. Energy recovery in existing water networks: towards greater sustainability</i>	51
<i>Appendix II. Modelling irrigation networks for the quantification of potential energy recovering: A case study</i>	83
<i>Appendix III. Calibrating a flow model in an irrigation networks: Case study in Alicante, Spain</i>	119
<i>Appendix IV. Water-Energy nexus. Energy optimization in water distribution system. Case study ‘Postrasvase Júcar Vinalopó’ (Spain)</i>	145
<i>Appendix V. Energy footprint of water depending on consumption patterns</i>	167
<i>Appendix VI. PATs selection towards sustainability in irrigation networks: Simulated annealing as water management tool</i>	187
<i>Appendix VII. Modified affinity laws in hydraulic machines towards the Best Efficiency Line</i>	217
<i>Appendix VIII. PATs operating in water networks under unsteady flow conditions: control valve maneuver and overspeed effect</i>	243
