Abstract 3

Resumen 5

Resum 7

Contents 9

1 Introduction 15

1.1 Overview. 15
1.2 State of the art 17
1.2.1 Experiments and techniques 17
1.2.2 Analytical and numerical models 21
1.3 Research objectives and thesis outline 28

2 Experimental data, measurement techniques and validation methodology 33

2.1 Introduction 33
2.2 Experimental datasets selected 34
2.3 Description of the specific experimental facility used for this thesis (PW series) 37
2.4 Liquid mean velocity and turbulence measurements 38

2.5 Void fraction, bubble frequency, bubble velocity, interfacial area concentration and bubble size measurement . . . 40
2.5.1 Signal processing in needle probes . . . 40
2.5.2 Void fraction . . . 42
2.5.3 Bubble frequency . . . 43
2.5.4 Bubble velocity . . . 43
2.5.5 Interfacial Area Concentration . . . 44
2.5.6 Chord length . . . 45
2.5.7 Bubble size distribution and mean diameters . . . 45
2.6 Measurements of bubble size distribution at different heights . . . 49
2.7 Variables measured with needle probes and potential types of theoretical variables . . . 51

3 Two-phase flow modelling 55
3.1 Introduction . . . 55
3.2 Dispersed phase representaiton . . . 56
3.3 Interfacial force modelling . . . 57
3.3.1 Drag force . . . 58
3.3.2 Lift force . . . 62
3.3.3 Virtual mass force . . . 64
3.3.4 Wall lubrication force . . . 64
3.4 Particle collision . . . 65
3.5 Turbulence modelling . . . 67
3.6 Turbulence on interfacial forces . . . 72
3.7 Size distribution modelling . . . 75
3.8 Non-linearity effects on interfacial and wall-interaction forces in a polydisperse flow . . . 77

4 Volume Of Fluid method (VOF) 81
4.1 Introduction . . . 81
4.2 Mathematical formulation . . . 83
4.3 Modelling and setup . . . 84
4.4 Bubble formation an detachment . . . 87
4.5 Flow field perturbation after detachment . . . 91
4.6 Bubble path and wake . . . 91

4.7 Velocity of a bubble rising . . . 95
4.8 Conclusions . . . 97

5 Computational Fluid Dynamics - Discrete Element Method (CFD-DEM) 99

5.1 Introduction . . . 100
5.2 Mathematical formulation and methods . . . 103
5.2.1 DEM formulation . . . 103
5.2.2 Eulerian formulation (CFD) . . . 104
5.2.3 Particle force coefficients . . . 105
5.2.4 Numerical methods and simulation set up . . . 108
5.3 Dispersed phase variables calculation . . . 109
5.4 Void fraction and momentum exchange assignment . . . 113
5.4.1 Description of the new equivolumetric sub-element method . . . 114
5.4.2 Validation and convergence study . . . 116
5.5 Single bubble rising in a quiescent liquid . . . 118
5.5.1 Mesh sensitivity . . . 118
5.5.2 Bubble velocity and acceleration . . . 120
5.5.3 Test case with initially agitated liquid . . . 121
5.6 Injection model and fluid flow influence . . . 122
5.6.1 Injection algorithm to seed the bubbles . . . 122
5.6.2 Boundary conditions and flow influence of the injection patterns . . . 124
5.7 Bubble size distribution and axial evolution . . . 126
5.7.1 Simplified model for bubble expansion . . . 127
5.7.2 Axial evolution study and validation . . . 128
5.8 Bubble dispersion and pseudoturbulence . . . 130
5.8.1 Carrier phase turbulence model . . . 130
5.8.2 Bubble dispersion model . . . 131
5.8.3 Validation of the turbulence and dispersion models and influence on the results . . . 133
5.9 Bubble forces analysis . . . 137
5.10 Dispersed phase variables calculation: experimental vs CFD data . . . 138
5.11 Results and discussion . . . 142
5.11.1 Continuous phase radial profiles . . . 142
5.11.2 Dispersed phase radial profiles . . . 144

5.11.3 Cross-section average evolution . . . 150
5.11.4 A critical assessment on validation procedures against needle probes experimental data . . . 152
5.12 Conclusions . . . 159

6 Two-Fluid Model (TFM) 163
6.1 Introduction . . . 163
6.2 Mathematical formulation and methods . . . 164
6.2.1 Interfacial models . . . 166
6.2.2 Turbulence models . . . 178
6.3 Numerical procedure . . . 179
6.4 Population balance model . . . 180
6.5 CFD setup . . . 184
6.6 Tuning approach . . . 186
6.6.1 Drag force . . . 186
6.6.2 Bubble induced turbulence . . . 187
6.6.3 Non-drag forces . . . 188
6.6.4 Preliminary results . . . 189
6.7 Critical approach . . . 194

7 System codes 195
7.1 Introduction . . . 195
7.2 Mathematical formulation and setup . . . 197
7.2.1 Drift-velocity approach (DVA) . . . 197
7.2.2 Drag coefficient approach (DCA) . . . 199
7.2.3 Drag coefficient approach with specific drag closure and mean bubble size distribution (DCA*) . . . 200
7.2.4 Modelling and setup . . . 202
7.3 Results . . . 203
7.3.1 Model comparison . . . 203
7.3.2 Validation with experiments . . . 206
7.4 Conclusions . . . 208

8 Preliminary studies on other bubbly flow systems 211
8.1 Overview . . . 211

8.2 Description of the simulation 212
8.3 DEM results 213
8.4 TFM results 215
8.5 Experimental facility proposed and preliminary data 217
8.6 Conclusions 220

9 Conclusions and future work 221
9.1 Conclusions 221
9.2 Future work 224
