

Table of contents

List of abbreviations	1
Introduction	7
I-Plant-Pest interaction.....	9
I.1 Crop loss due to pest.....	9
I.2 Plant response to herbivores.....	11
I.2.1 Plant direct defensive response.....	12
I.2.2 Plant indirect defensive response.....	16
II- Plant proteinase inhibitors.....	18
II.1 Plant proteinase inhibitors families.....	18
II.1.1 Serine proteinase inhibitors (SPIs).....	19
II.1.2 Cysteine proteinase inhibitors (Cystatins).....	24
II.1.3Aspartic proteinase inhibitors.....	25
II.1.4 Metallocoarboxypeptidase inhibitors.....	25
II.2 Role of proteinase inhibitors in plants.....	26
II.2.1 Effect on plant proteinases.....	26
II.2.2 Effect on programmed cell death.....	27
II.2.3 PIs as storage proteins.....	28
II.2.4 PIs as plant defense proteins.....	28
II.3 Proteinase inhibitors mechanism of action.....	30

III. PIs herbivory induced signaling in plant.....	32
IV. Biotechnological applications of PIs in crop pest resistance improvement.....	34
V. Insect adaptation to PIs.....	35
VI. Tomato proteinase inhibitors.....	36
VII. Barley Proteinase inhibitors.....	37
VII.1 Barley serine proteinase inhibitors.....	37
VII.2 Barley cysteine proteinase inhibitors.....	38
VIII. Tomato as a Solanaceae model plant.....	39
IX. South American tomato borer: <i>Tuta absoluta</i>	40
IX.1 <i>Tuta absoluta</i> biology.....	41
IX.2 Symptoms and damages.....	43
IX.3 Geographical Distribution.....	44
IX.4 Biological control of <i>Tuta absoluta</i>	45
IX.4.1 Parasitoids.....	45
IX.4.2 Predators.....	46
Objectives	51
Materials & Methods	55
I. Plant material and growth conditions.....	57
I.1 Plant material.....	57
I.2 Growth conditions.....	57

II. Microorganisms.....	58
II.1. Bacterial strains.....	58
II.2. Culture media.....	58
II.3. Competent bacteria preparation.....	58
II.3.1 Thermo-competent cells.....	58
II.3.2 Electro-competent cells.....	59
II.4 Bacterial transformation.....	60
III. Nucleic acids purification.....	61
III.1. Plasmid DNA extraction.....	61
III.2. Genomic DNA isolation.....	62
III.3. Total RNA purification.....	62
III.4. Nucleic acid quantification.....	63
IV. RNA retrotranscription.....	63
V. DNA amplification by PCR.....	63
VI. DNA electrophoresis on agarose gel.....	65
VII. DNA digestion with restriction enzymes.....	65
VIII. Cloning techniques.....	66
VIII.2 DNA ligase mediated ligation.....	68
VIII.3 Fragments ligation by homologous recombination (Gateway™, Invitogen).....	68
VIII.4 Sequencing.....	69

IX. Site directed mutagenesis.....	69
X. Protein expression induction.....	70
XI. SDS-PAGE protein separation.....	71
XII. Recombinant protein purification.....	74
XIII. Trypsin activity assay.....	74
XIV. Gene expression analysis.....	75
XV. Plant genetic transformation.....	76
XV.1. Seeds sterilization and germination.....	76
XV.2. <i>Agrobacterium tumefaciens</i> culture preparation.....	76
XV.3. Co-culture.....	77
XV.4. Explants wash.....	77
XV.5. Plants acclimatization in greenhouse.....	78
XV.6. Media and solutions.....	78
XV.7. Evaluation of the ploidy level in transgenic tomato plants.....	81
XVI. Tomato fruit characterization.....	81
XVI. 1. Morphological characters.....	81
XVI.2. Chemical characters.....	81
XVII. Insect feeding trials.....	83
XVII.1. Insects and growth conditions.....	83

XVII.2. <i>Tuta absoluta</i> feeding trials.....	84
XVII.3. <i>Nesidiocoris tenuis</i> feeding assay.....	84
XVII.4. Oviposition assays.....	85
XVIII. Insect enzymatic assays.....	85
XVIII.1. Total protein extraction.....	85
XVIII.2. Total protein quantification.....	86
XVIII.3 Enzymatic activity determination in crude extracts.....	87
XVIII.4. Enzyme histochemistry.....	87
XIX. Olfactory response.....	88
XX. Volatile compounds analysis.....	89
XXI. Statistical analysis.....	91
XXII. Bioinformatic tools.....	91
Chapter I: Improving BTI-CMc in vitro activity by genetic engineering.....	93
Results.....	95
I. Site directed mutagenesis.....	95
II. Expression constructs.....	95
III. Protein sequence analysis.....	97
III. Protein structure: 3D models.....	98
IV. Protein expression.....	100

III. Trypsin activity.....	101
Discussion.....	103
Chapter II: Enhancing tomato defense against <i>Tuta absoluta</i> by expressing two barley proteinase inhibitors.....	107
Results.....	109
I. Genetic transformation of tomato.....	109
I.1. Genetic constructs.....	109
I.2 Tomato genetic transformation.....	113
I.3. Transgene expression analysis.....	113
II. Tomato fruit characterization.....	117
II.1 Morphological characters.....	117
II.2 Chemical characters.....	120
III. <i>Tuta absoluta</i> feeding trials.....	120
III.1. Enzyme histochemistry.....	120
III.2. Development cycle.....	121
III.3. Weight and size.....	122
III.4. Survival.....	123
III.5. Oviposition.....	124
III.6. Overall toxicity evaluation.....	126
III.7. Insect enzymatic activity.....	127

IV. <i>Nesidiocoris tenuis</i> feeding trials.....	129
V. <i>Pin2</i> expression analysis.....	131
VI. Volatiles analysis.....	132
VI.1. Olfactory response.....	132
VI.2. Volatiles organic compounds (VOCs) emission profiles.....	133
VII. Glandular trichomes density.....	135
Discussion	136
Conclusions	159
References	163
