| Abstract | iii |
| Contents | iii |
| 1 Introduction | 13 |
| 1.1 Motivation | 13 |
| 1.2 Challenges | 22 |
| 1.3 Contributions | 25 |
| 1.4 Structure | 34 |
| 2 Background and related research | 39 |
| 2.1 Definition of the cash management problem | 39 |
| 2.2 A review of cash management models | 43 |
| 2.3 Analysis | 78 |
| I Data-driven cash flow analysis | 85 |
| 3 The savings hypothesis | 87 |
| 3.1 Motivation | 87 |

| | | |
|-----|--|-----|
| 3.2 | Description and data preprocessing | 88 |
| 3.3 | Building forecasting models | 91 |
| 3.4 | Forecasting models' comparison | 96 |
| 3.5 | Does a better forecast produce better policies? | 99 |
| 3.6 | Summary | 107 |
| 4 | Empirical analysis of daily cash flow | 111 |
| 4.1 | Motivation | 111 |
| 4.2 | Data summary | 114 |
| 4.3 | A cross-validated test for non-linearity | 121 |
| 4.4 | The impact of data transformations | 127 |
| 4.5 | Summary | 129 |
| II | Multiobjective cash management | 133 |
| 5 | A multiobjective approach to the cash management problem | 135 |
| 5.1 | Motivation | 135 |
| 5.2 | Formalizing the multiobjective cash management problem | 137 |
| 5.3 | An illustrative example using the Miller and Orr's model | 143 |
| 5.4 | On the utility of cash management models | 152 |
| 5.5 | Summary | 154 |
| 6 | On the use of distance indexes to find robust policies | 157 |
| 6.1 | Motivation | 157 |
| 6.2 | On the use of distances as a measure of robustness | 160 |
| 6.3 | An illustrative example using the Miller and Orr's model | 166 |
| 6.4 | Discussion | 169 |
| 6.5 | Summary | 170 |

| | | |
|------|---|-----|
| 7 | Selecting cash management models from a multiobjective perspective | 173 |
| 7.1 | Motivation | 174 |
| 7.2 | Showing models in the cost-risk space | 176 |
| 7.3 | Choosing models according to risk preferences | 180 |
| 7.4 | Deriving loss curves from operating conditions | 183 |
| 7.5 | Summary | 186 |
| 8 | Boundless multiobjective models for cash management | 189 |
| 8.1 | Motivation | 189 |
| 8.2 | Linearizing the cash management problem | 191 |
| 8.3 | Reformulating the Gormley-Meade's model as a linear-quadratic program | 194 |
| 8.4 | Boundless multiobjective models for cash management | 198 |
| 8.5 | Sensitivity analysis to forecasting errors | 201 |
| 8.6 | Summary | 205 |
| 9 | Compromise programming models for cash management | 207 |
| 9.1 | Motivation | 207 |
| 9.2 | Risk analysis in cash management. | 209 |
| 9.3 | Compromise models to solve the MOCMP | 215 |
| 9.4 | Summary | 226 |
| III | Managing multiple bank accounts | 229 |
| 10 | Robust cash management with multiple bank accounts | 231 |
| 10.1 | Motivation | 231 |
| 10.2 | Formulation of the MBACMP. | 233 |
| 10.3 | Theoretical results | 236 |
| 10.4 | Robust formulations of the MBACMP | 238 |
| 10.5 | A new two-stage cost-sensitive robust formulation of the MBACMP | 241 |
| 10.6 | Empirical case study | 245 |

| | |
|---|-----|
| 10.7 Summary | 250 |
| 11 PyCaMa: Python for cash management | 253 |
| 11.1 Motivation | 253 |
| 11.2 Problem formulation | 255 |
| 11.3 Software description | 257 |
| 11.4 An illustrative example | 259 |
| 11.5 Impact | 261 |
| 11.6 Summary | 262 |
| 12 Conclusions and future work | 265 |
| 12.1 Summary of challenges and contributions | 265 |
| 12.2 Data-driven multiobjective decision-making | 271 |
| 12.3 Future work. | 273 |
| A Terminology and acronyms | 277 |
| Bibliography | 281 |
